

The DNRC Forestry Division's Stewardship Program delivers ~\$2M annually in financial assistance to help private forest landowners manage their forest land sustainably. This funding, made available through a partnership with US Forest Service State and Private Forestry, supports active forest stewardship, enhances public benefits from private forests, and provides important jobs in the forest products sector. Financial and technical assistance for hazardous fuels reduction is made available to individual forest landowners through regional partnerships with organizations and local governments. Inquiries can be directed to the contact numbers below:
