

# Project Timeline

## Mineral County Floodplain Maps Update

### Flood Study Conducted

4 steps of a flood study.

- 1) Survey & LiDAR
- 2) Hydrology (flood flow)
- 3) Hydraulics (engineering)
- 4) Mapping (delineation)

### Public Review

Public open houses are held during this time.

During this time public comments are encouraged. There will be an official 90-day appeal period after the maps become preliminary.

### Resiliency and Mitigation efforts

Once new maps become effective the community can determine what mitigation efforts it would like to pursue to reduce flood risks.
