

Project Timeline Powell County Floodplain Maps Update

Estimated Completion date

2020-2021	Late 2022 early 2023	Mid 2023	Late 2023 early 2024 (est.)	2025 (est.)
<p>Measurements are made of the topography around the river, along with any culverts, bridges, and road crossings. LiDAR uses an airplane to collect ground elevation over a large area, and ground survey supplements the airborne data. Flood flow data determine how much water there will be in a river during a flood event.</p>	<p>The elevation and survey data are combined with the flood flow data to determine where the water will go when it overflows the channel and how far it will spread out. The area shown to be underwater and at high risk is mapped as the regulatory floodplain.</p>	<p>Draft data is delivered to the communities. Public open houses will be conducted for landowners to review the information.</p>	<p>FEMA Preliminary Maps are produced and ready for public review and comment period. A second public open house is usually conducted to review the information. 90 day official comment & appeal period held.</p>	<p>FEMA Flood Insurance Rate Maps finalized.</p>
Data gathering	Engineering and floodplain modeling	Draft Data available public review	Preliminary Data public comment and appeal period	Flood Insurance Rate Maps become effective

Flood Study Conducted

4 steps of a flood study.

- 1) Survey & LiDAR
- 2) Hydrology (flood flow)
- 3) Hydraulics (engineering)
- 4) Mapping (delineation)

Public Review

2 public open houses are usually held during this time. Once at draft map stage and again at preliminary map stage.

During this time public comments are encouraged. There will be a official 90 day appeal period after the maps become preliminary.

Resiliency and Mitigation efforts

Once new maps become effective the community can determine what mitigation efforts it would like to pursue to reduce flood risks.
