    36.9  Figure "B" Creek (L bank)
    37.0  Middle Fork Prairie Elk Creek (L bank)
    37.1  East Fork Prairie Elk Creek (R bank)
This river mile index of the Missouri River basin is the second in a series being published by the Department of Natural Resources and Conservation. Eventually, we hope to include in these indexes all rivers and streams in the state; the index for the Yellowstone River Basin was published in 1976, and work is underway on the index for the Columbia Basin. The Department believes that measurement by river miles is the most practical method of measurement along waterways for such purposes as water rights description and scientific investigation, among many others, and makes these indexes available in the hope that they will become a standard by which agencies and individuals can establish measurements by river mile without fear of error or misinterpretation.

Measurements were made following the procedures and suggestions set forth in River Mileage Measurement, Hydrology Committee Bulletin No. 14 of the Water Resources Council (Washington D.C., 1968). Milesages were derived from U.S. Geological Survey topographic maps, aerial photos, and county projection sheets (2"-to-the-mile township plats projected by the Department from aerial photos). About 80 percent of the basin has topographic map coverage (1:24,000 and 1:62,500), and the remaining areas had aerial photo and/or projection sheet coverage (1:31,680).

All distances in the index (given to the nearest tenth of a mile) were measured from the mouth upstream. The designation "right bank" or "left bank" given to identified features refers to their position in relation to the main stream as it would appear to an observer facing downstream; a "right bank" tributary, for instance, would enter the main stream on the downstream-facing observer's right.

The index was compiled by Mel McBeath, Civil Engineer with the Department's Technical Services Bureau, and typed by Marsha Lynas, Debbie Savage, and Laurie Hamer.

We invite inquiries about the indexes for the rest of the state.

Sincerely,

Robert Culver, Acting Administrator
Water Resources Division
