Water Resources Division
Water Rights Bureau

ENVIRONMENTAL ASSESSMENT
For Routine Actions with Limited Environmental Impact

Part I. Proposed Action Description

1. Applicant/Contact name and address: Applicant:

Robert and Debora Lancaster
3455 W. Meyer RD
San Bernardino, CA 92407

2. Type of action: Application for Beneficial Water Use Permit No. 41F 30132488. The Applicant has installed a well and proposes to appropriate up to 20 gallons per minute (GPM) and up to 1.86 acre-feet (AF) per year of water within the Yellowstone Controlled Groundwater Area (YCGA).

3. Water source name: Groundwater.

4. Location affected by project: SWNWNWSE, SECTION 25, T11S, R3E, Gallatin County. This is private property owned by the Applicant near a neighborhood within the town of West Yellowstone.

5. Narrative summary of the proposed project, purpose, action to be taken, and benefits: The Applicant proposes to pump a maximum of 20 GPM not to exceed 1.86 AF per year of water for the domestic and lawn and garden use from January 1 to December 31. The well is located on private property and is located within the YCGA. The water from this well measured 49 degrees Fahrenheit at the wellhead. Potts Drilling Inc. measured the specific conductance at 204.5 micromhos. (See map Below)

Part II. Environmental Review

1. Environmental Impact Checklist:

<h2>PHYSICAL ENVIRONMENT</h2>

WATER QUANTITY, QUALITY AND DISTRIBUTION

Water quantity - *Assess whether the source of supply is identified as a chronically or periodically dewatered stream by DFWP. Assess whether the proposed use will worsen the already dewatered condition.*

Determination: No significant impact. The source of water is groundwater. The well's proposed flow rate of 20 GPM and annual volumetric usage of 1.86 AF will not have a significant impact on nearby surface water flow or water users.

Water quality - *Assess whether the stream is listed as water quality impaired or threatened by DEQ, and whether the proposed project will affect water quality.*

Determination: No impact. The source of water is groundwater, which is not listed by the Montana Department of Environmental Quality (DEQ) on the CWAIC website. Adjacent surface water quality is not likely to be affected by the proposed well, as Potts Drilling, a licensed driller (license number WWC-512), has constructed the well in accordance with the rules of the Board of Water Well Contractors.

Groundwater - *Assess if the proposed project impacts ground water quality or supply. If this is a groundwater appropriation, assess if it could impact adjacent surface water flows.*

Determination: No significant impact. The source of water is groundwater. Groundwater quality is not likely to be affected by the proposed well, as Potts Drilling, a licensed driller (license number WWC-512), has constructed the well in accordance with the rules of the Board of Water Well Contractors.

The U.S. National Park Service has been notified of this application pursuant to the State of Montana/U.S. National Park Service Compact, Article II, Section B.2.b.ii.3.(b).

DIVERSION WORKS - *Assess whether the means of diversion, construction and operation of the appropriation works of the proposed project will impact any of the following: channel impacts, flow modifications, barriers, riparian areas, dams, well construction.*

Determination: No significant impact. Water will be diverted using a well with a pump, and use will be measured using a meter supplied by DNRC. Potts Drilling, a licensed driller (license number WWC-512), has constructed the well in accordance with the rules of the Board of Water

Well Contractors. The diversion works should not create significant channel impacts, flow modifications, or barriers. No significant impacts to existing resources have been identified.

UNIQUE, ENDANGERED, FRAGILE OR LIMITED ENVIRONMENTAL RESOURCES

Endangered and threatened species - Assess whether the proposed project will impact any threatened or endangered fish, wildlife, plants or aquatic species or any “species of special concern,” or create a barrier to the migration or movement of fish or wildlife. For groundwater, assess whether the proposed project, including impacts on adjacent surface flows, would impact any threatened or endangered species or “species of special concern.”

Determination: No significant impact. A search of the MTNHO Species of Concern website returned the following results:

- 15 animal Species of Concern: Bison, Wolverine, Canada Lynx, Little Brown Myotis, Grizzly Bear, Northern Goshawk, Evening Grosbeak, Cassin’s Finch, Clark’s Nutcracker, Green-tailed Towhee, Brewer’s Sparrow, Western Toad, Plains Spadefoot, Westslope Cutthroat Trout.
- 0 animal Potential Species of Concern.
- 1 animal Special Status Specie: Bald Eagle.
- 2 plant Species of Concern: Slender Indian Paintbrush, Dwarf Purple Monkeyflower.
- 1 plant Potential Species of Concern:

As this proposed application is to divert water from a well located on private property, no significant impacts will occur to threatened, endangered, or special concern species. The pumping of groundwater will not decrease surface water flows to significantly impact any of these species.

Wetlands - Consult and assess whether the apparent wetland is a functional wetland (according to COE definitions), and whether the wetland resource would be impacted.

Determination: Not applicable. USFWS Wetlands Mapper shows no wetlands exist in the area. No wetlands are involved in the project.

Ponds - For ponds, consult and assess whether existing wildlife, waterfowl, or fisheries resources would be impacted.

Determination: Not applicable. No ponds are involved in the project.

GEOLOGY/SOIL QUALITY, STABILITY AND MOISTURE - Assess whether there will be degradation of soil quality, alteration of soil stability, or moisture content. Assess whether the soils are heavy in salts that could cause saline seep.

Determination: No significant impact. This well has been constructed by Potts Drilling, a licensed driller (license number WWC-512), in accordance with the rules of the Board of Water Well Contractors, so there should not be significant impacts on nearby streambanks and

vegetative cover. Use of water will continue in a manner consistent with locally accepted, historic practices and will not significantly impact soil quality.

VEGETATION COVER, QUANTITY AND QUALITY/NOXIOUS WEEDS - *Assess impacts to existing vegetative cover. Assess whether the proposed project would result in the establishment or spread of noxious weeds.*

Determination: No significant impact. This well has been constructed by Potts Drilling, a licensed driller (license number WWC-512), in accordance with the rules of the Board of Water Well Contractors, so there should not be significant impacts on nearby streambanks and vegetative cover. A small area was disturbed by drilling the well, but this should have no significant impact on the surrounding area's vegetative cover and neither should it allow the establishment of noxious weeds.

AIR QUALITY - *Assess whether there will be a deterioration of air quality or adverse effects on vegetation due to increased air pollutants.*

Determination: No impact. No deterioration of air quality will result from the drilling of this well or diversion of water from it.

HISTORICAL AND ARCHEOLOGICAL SITES - *Assess whether there will be degradation of unique archeological or historical sites in the vicinity of the proposed project if it is on State or Federal Lands. If it is not on State or Federal Lands simply state NA-project not located on State or Federal Lands.*

Determination: Not applicable. The project is not located on State or Federal Lands. Furthermore, the Applicant made no mention of significant historical or archeological sites on the property.

DEMANDS ON ENVIRONMENTAL RESOURCES OF LAND, WATER, AND ENERGY - *Assess any other impacts on environmental resources of land, water and energy not already addressed.*

Determination: No impact. No other demands on environmental resources of land, water, and energy are anticipated.

HUMAN ENVIRONMENT

LOCALLY ADOPTED ENVIRONMENTAL PLANS AND GOALS - *Assess whether the proposed project is inconsistent with any locally adopted environmental plans and goals.*

Determination: No significant impact. Drilling wells for water supply and using water for domestic purposes are locally accepted practices within the state of Montana and the West Yellowstone area.

ACCESS TO AND QUALITY OF RECREATIONAL AND WILDERNESS ACTIVITIES - *Assess whether the proposed project will impact access to or the quality of recreational and wilderness activities.*

Determination: No impact. Significant recreational and wilderness activities exist in the area, but the proposed project is located on small parcel of private property in a rural neighborhood and will not impact access to or the quality of recreational and wilderness activities.

HUMAN HEALTH - *Assess whether the proposed project impacts on human health.*

Determination: No significant impact. The water will be used to supply one home for domestic purposes. A March 2011 DEQ Fact Sheet entitled “Individual Drinking Water Wells – Water Quality Monitoring & Treatment” notes that water quality from individual drinking water wells is monitored only by the owner and is “generally not subject to any drinking water standards.” The Applicant maintains sole responsibility for testing and treatment of water for any and all domestic purposes.

PRIVATE PROPERTY - *Assess whether there are any government regulatory impacts on private property rights.*

Yes ___ *No* **X** *If yes, analyze any alternatives considered that could reduce, minimize, or eliminate the regulation of private property rights.*

Determination: The project does not impact government regulations on private property rights.

OTHER HUMAN ENVIRONMENTAL ISSUES - *For routine actions of limited environmental impact, the following may be addressed in a checklist fashion.*

Impacts on:

- (a) Cultural uniqueness and diversity? No impacts identified.
- (b) Local and state tax base and tax revenues? No significant impacts identified.
- (c) Existing land uses? No significant impacts identified.
- (d) Quantity and distribution of employment? No impacts identified.
- (e) Distribution and density of population and housing? No significant impacts identified.
- (f) Demands for government services? No significant impacts identified.
- (g) Industrial and commercial activity? No impacts identified.
- (h) Utilities? No significant impacts identified.
- (i) Transportation? No impacts identified.
- (j) Safety? No impacts identified.

(k) Other appropriate social and economic circumstances? No impacts identified.

2. Secondary and cumulative impacts on the physical environment and human population:

Secondary Impacts: No secondary impacts have been identified.

Cumulative Impacts: No cumulative impacts have been identified.

3. Describe any mitigation/stipulation measures: The Applicant will install a water use meter provided by the Department to measure the total volume of water used. The Applicant will report this volume to the Montana Bureau of Mines and Geology annually.

4. Description and analysis of reasonable alternatives to the proposed action, including the no action alternative, if an alternative is reasonably available and prudent to consider: If the Applicant is not allowed to divert water from the existing well, they may not be able to supply their home with water for domestic purposes. Since the property is located in a rural region, they may not be able to connect to a municipal system, but they may be able to haul water in. The no action alternative would be to not divert water from the well, which could leave the Applicant's house without domestic water.

PART III. Conclusion

1. Preferred Alternative: The preferred alternative is to obtain a water right permit to use the drilled well.

2. Comments and Responses: None at this time.

3. Finding:

Yes ___ No X Based on the significance criteria evaluated in this EA, is an EIS required?

If an EIS is not required, explain why the EA is the appropriate level of analysis for this proposed action: The EA is the appropriate level of analysis because the proposed project is to drill a small groundwater well in the YCGA for the domestic use of one house, which is a locally accepted practice. No significant impacts are anticipated. None of the identified impacts for any of the alternatives is significant as defined in ARM 36.2.524.

Name of person(s) responsible for preparation of EA:

Name: Michael Everett

Title: Water Resource Specialist
