TOTAL VOLUME USED THIS YEAR IN ACRE-FEET					
(1 ACRE-FOOT = 325,851 GALLONS)					

<sup>\*</sup>A totalizer can be a highly sensitive, expensive piece of equipment. It should be protected against unnecessary rough handling and freezing temperatures. Installation needs to allow the meter to be removed after the recording period for storage in a non-freezing environment.

<sup>\*</sup>Calibration should be performed a minimum of once every four years. This is usually done during the non-recording period by returning the meter to the factory or sending it to an authorized service center.
