

CHECKLIST ENVIRONMENTAL ASSESSMENT

Proposed Action: Approve Drilling Permit (Form 22)

Project/Well Name: Outpost Federal 4H

Operator: Slawson Exploration Company, Inc.

State: Montana

Location: NWNW T26N R59E Sec. 2

County: Roosevelt

Field (or Wildcat): Wildcat

Proposed Project Date: TBD

I. DESCRIPTION OF ACTION

Triple derrick drilling rig to drill a single lateral horizontal Bakken Formation test, 23,409' MD/10,360' TVD.

II. PROJECT DEVELOPMENT

A. PUBLIC INVOLVEMENT, AGENCIES, GROUPS, OR INDIVIDUALS CONTACTED

10 days from public notification opportunity to protest for hearing:

- Published in Helena Independent Record on 11/18/2025.
- Published in Northern Plains Independent on 11/20/2025.

No written demand for hearing has been filed per ARM 36.22.601 as of 12/1/2025.

Montana Bureau of Mines and Geology, GWIC website (Roosevelt County Wells).

USDA Natural Resources Conservation Service-Soils Map

B. ALTERNATIVES CONSIDERED

No Action Alternative: Permit to drill the well would not be issued by BOGC.

Action Alternative: Referred to the BOGC for further environmental review.

III. IMPACTS ON THE PHYSICAL ENVIRONMENT

A. AIR QUALITY

Long drilling time: No, 10-20 days.

Unusually deep drilling (high horsepower rig): No

Emission sources: Vehicles traveling on county road to location, combustion engines on location during drilling operations. Fugitive dust from traveling operations and location during active drilling.

Possible H₂S gas production: Potentially in Mississippian formations.

In/near Class I air quality area: No.

Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211. AQB review.

Comments: No special concerns – Triple derrick drilling rig to drill a single lateral horizontal Bakken Formation test, 23,409' MD/10,360' TVD. If there are no gas gathering systems nearby, associated gas can be flared under Board Rule 36.22.1220.

B. WATER QUALITY

Salt/oil-based mud: Steel surface casing hole will be drilled with freshwater and freshwater mud system to 2093', Rule 36.22.100.1. Will drill with oil-based invert drilling fluids for the intermediate casing hole. Horizontal hole will be drilled with saltwater.

High water table: No.

Surface drainage leads to live water: Ephemeral drainage Cedar Creek is approximately 530' east of location, and an unnamed ephemeral drainage lies approximately 530' to the southwest.

Water well contamination: There are no water wells within a ½ mile radius. The closest water well is an unused well approximately 3098' southwest with a total depth of 50'. The surface hole will be drilled with freshwater and freshwater mud to 2093' and steel surface casing will be run and cemented back to the surface to protect groundwater.

Porous/permeable soils: No, silty loam.

Class I stream drainage: None.

Groundwater vulnerability area: No.

Mitigation:

☐ Lined reserve pit

☒ Adequate surface casing

☐ Berms/dykes, re-routed drainage

☒ Closed mud system

☒ Off-site disposal of solids/liquids (in approved facility)

☐ Other:

Comments: Steel surface casing will be run to 2093' and cemented back to surface to protect freshwater zones (Fox Hills aquifer) in adjacent water wells, Rule 36.22.1001. Adequate surface casing and BOP equipment to prevent problems, (5,000 psi annular and double ram), Rule 36.22.1014.

C. SOILS/VEGETATION/LAND USE

Vegetation: Badlands, little vegetation.

Stream crossing: None anticipated.

Erosion potential: High, cut of up to 49.6' and fill of up to 30.8'.

Loss of soil productivity: No, location will be restored after drilling if unproductive.

Unusually large wellsite (Describe dimensions): A well site of 600' X 600' required for a thirteen-well pad.

Damage to improvements: None, badlands.

Conflict with existing land use/values: Slight.

Mitigation:

- ☐ Avoid improvements (topographic tolerance)
- ☐ Exception location requested
- ☒ Stockpile topsoil
- ☐ Stream Crossing Permit (other agency review)
- ☒ Reclaim unused part of wellsite if productive
- ☐ Special construction methods to enhance reclamation

Access road: Access will be from a +/- 9290' proposed access road off Highway 327, southwest of Bainville, MT.

Drilling fluids/solids: Slawson Exploration Company, Inc. will not be utilizing a drilling pit. Drilling fluids and solids will be transported to a state approved disposal facility.

Comments: MT DEQ 318 permit authorized on 9/11/2025.

D. HEALTH HAZARDS/NOISE

Proximity to public facilities/residences: No occupied structures within ¼ mile radius.

Possibility of H2S: Possibility in Mississippian formations.

Size of rig/length of drilling time: 10-20 days.

Mitigation:

- ☒ Proper BOP equipment
- ☐ Topographic sound barriers
- ☐ H2S contingency and/or evacuation plan
- ☐ Special equipment/procedures requirements
- ☐ Other:

E. WILDLIFE/RECREATION

Sage Grouse: No.

Proximity to sensitive wildlife areas (DFWP identified): One mile northeast of Missouri River, outside of Riparian area.

Proximity to recreation sites: None.

Creation of new access to wildlife habitat: No.

Conflict with game range/refuge management: No.

Threatened or endangered species within 5 miles: Veery, Red-headed Woodpecker, Bobolink, Black-billed Cuckoo, Whooping Crane, Piping Plover, Least Tern, Silver-haired Bat, Northern Myotis, Long-eared Myotis, Sicklefin Chub, Northern Redbelly Dace, Sauger, Iowa Darter, Pallid Sturgeon, Sturgeon Chub, Shortnose Gar, and Blue Sucker.

Mitigation:

- ☐ Avoidance (topographic tolerance/exception)
- ☐ Other agency review (DFWP, federal agencies, DNRC Trust Lands)
- ☐ Screening/fencing of pits, drillsite
- ☐ Other:

Comments: Badlands, on BLM surface. There may be species of concern that may be impacted by this wellsite. We ask the operator to consult with the BLM as to what they would like done if a species of concern is discovered at this location.

IV. IMPACTS ON THE HUMAN POPULATION

A. HISTORICAL/CULTURAL/PALEONTOLOGICAL

Proximity to known sites:

Mitigation:

☐ Avoidance (topographic tolerance, location exception)

☐ Other agency review (SHPO, DNRC Trust Lands, federal agencies)

Other: The Board of Oil & Gas has no jurisdiction over BLM surface lands.

B. SOCIAL/ECONOMIC

Substantial effect on tax base:

☐ Create demand for new governmental services

☐ Population increase or relocation

Comments: No concerns.

IV. SUMMARY

No long-term impacts expected. Some short-term impacts will occur but can be mitigated.

I conclude that the approval of the subject Notice of Intent to Drill (does/**does not**) constitute a major action of state government significantly affecting the quality of the human environment, and (does/**does not**) require the preparation of an environmental impact statement.
