Subject: Correct and Complete Application for Beneficial Water Use Permit No. 76LJ 30170796

Dear Applicant,

The Department of Natural Resources and Conservation (Department) has determined that your application is correct and complete pursuant to ARM 36.12.1601. Please remember that correct and complete **does not mean that your application will be granted.** The purpose of this letter is to indicate that the Department has enough information to analyze your water right application.

The Department will issue a Draft Preliminary Determination within 60 days of the date of this letter per §85-2-307(2)(b), MCA.

Following issuance of the Draft Preliminary Determination, you (Applicant) will have 15 business days to request an extension of time to submit additional information, if desired pursuant to §85-2-307(3)(a), MCA.

If no extension of time is requested and the Draft Preliminary Determination decision is to grant your application or grant your application in modified form, the Department will prepare a notice of opportunity to provide public comment, per §85-2-307(4)(a), MCA.

If no extension of time is requested and the Draft Preliminary Determination decision is to deny your application, the Department will adopt the Draft Preliminary Determination as the final determination per §85-2-307(3)(d)(ii), MCA.

If you have any questions or concerns about the application process, please contact me.

Best,

**Subject: Form 600 Application for Beneficial Water Use Submittal for Old Apostolic Lutheran Church of Lakeside, Montana (Application 76LJ 30170796)**

Dear Jim,

Water and Environmental Technologies (WET) is pleased to submit the enclosed Form 600 and supporting documents on behalf of the Old Apostolic Lutheran Church of Lakeside, Montana in support of the proposed groundwater appropriation identified by application number 76LJ 30170796.

As discussed during the preapplication meeting, the purpose of this application is to provide the flow rate and volume required for institutional use and lawn and garden associated with the proposed church site near the intersection of Montana Highway 35 and Montana Highway 206. The use will divert water from the Deep Alluvial Aquifer via a 400 foot deep well. A total volume of 10.37 acre-feet and a flow rate of 94 gallons per minute (GPM) is required for the proposed use which will serve the institutional water needs of the church and provide irrigation to a total of 3.5 acres.

The following attachments are provided:

- Form 600– Application for Beneficial Water Use Permit
- Figures – Site Vicinity Map, Site Utility Plan, Building Utility Plan, General Notes & Details, Irrigated Area Exhibit
- Attachment A – Pump and Motor Specifications
- Attachment B – Total Dynamic Head Calculations
- Attachment C – Water Use Calculations and Irrigated Area
- Attachment D – Documentation of Possessory Interest

If you have any questions regarding this submittal or any of the supporting documents, please reach out to via email at [jgraham@waterenvtech.com](mailto:jgraham@waterenvtech.com) or phone at (406) 309-6085.

Sincerely,

A handwritten signature in cursive script, appearing to read 'Jamie Graham', is written in black ink.

Jamie Graham

## **Application For Beneficial Water Use**

APPLICATION FOR  
**BENEFICIAL WATER USE  
PERMIT**

§ 85-2-302, MCA

Form No. 600 (10/2025)

For Department Use Only  
DNRC Water Resources

OCT 10 2025

Kalispell Unit

**FILING FEE**

**\$2900/\$1600 – Inside a Basin Closure Area, Controlled  
Groundwater Area or Compact Closure; without/with  
filing fee reduction.**

**\$2500/\$1200 – Outside a Basin Closure Area; Controlled  
Groundwater Area or Compact Closure; without/with  
filing fee reduction.**

**INFORMATION**

An application will be eligible for a filing fee reduction and expedited timelines if the applicant completes a preapplication meeting with the Department (ARM 36.12.1302(1)), which includes submitting any follow-up information identified by the Department (ARM 36.12.1302(3)(c)) and receiving either Department-completed technical analyses or Department review of applicant-submitted technical analyses (ARM 36.12.1302(4) and (5)). An application for the proposed project also must be submitted within 180 days of delivery of Department technical analyses or scientific credibility review and no element on the submitted application can be changed from the completed preapplication meeting form (ARM 36.12.1302(6)). If application is eligible for a filing fee reduction, \$500 paid for Form 600P-B will be credited toward filing fees shown above.

**NOTE:** If a contact person is identified as an attorney, all communication will be sent only to the attorney unless the attorney provides written instruction to the contrary (ARM 36.12.122(2)). If a contact person is identified as a consultant, employee, or lessee, the individual filing the water right form or objection form will receive all correspondences, and a copy may be sent to the contact person (ARM 36.12.122(3)).

Answer every question and applicable follow-up questions. Use the checkboxes to denote yes ("Y"), no ("N"), or not applicable ("NA"). Questions that require items to be submitted to the Department have a submitted ("S") checkbox, which is marked when the required item is attached to the Application. Label all submitted items with the question number for which they were submitted. Narrative responses that are larger than the space provided can be answered in an attachment. If an attachment is used, specify "see attachment" on this form, and label the attachment with the question number. Constrain narrative responses to the specific question as is asked on the form; do not respond to multiple questions in one narrative. Responses in the form of a table may be entered into the table provided on this form or in an attachment. If an attachment is used, the table must have the exact headings found on this form, and "see attachment" must be entered as a response to the relevant question. Clearly label all units in tables and narrative responses.

## **PREAPPLICATION AND TECHNICAL ANALYSES INFORMATION**

1. ☒ **Y** ☐ **N** Do you elect for Department technical analyses to be used for criteria assessment?
2. ☒ **Y** ☐ **N** Did you have a preapplication meeting AND complete a Permit Preapplication Meeting Form Part A and Part B (Form 600P-A and 600P-B)?

**IF QUESTION 2 IS NO, answer 2.a and 2.b:**

- 2.a. ☐ **S** Submit the Technical Analyses Addendum (Form 600-TAA).
- 2.b. ☐ **S** ☐ **NA** Submit the technical analyses, if you elected in question 1 for Applicant technical analyses to be used for criteria assessment. Select "NA" if you elected for Departmental technical analyses.

**IF QUESTION 2 IS YES, answer 2.c, 2.d, and 2.e:**

- 2.c. ☐ **Y** ☒ **N** Has any element of the project described in this application changed from the mandatory elements of the project described in the completed form 600P? **If yes:**

2.c.i. Please explain.

---

---

---

---

---

---

- 2.c.ii. ☐ **S** Submit the Technical Analyses Addendum (Form 600-TAA).

- 2.d. ☒ **Y** ☐ **N** Are the technical analyses to be used for criteria assessment exactly the same as those completed during the preapplication process? **If no:**

2.d.i. Please explain.

---

---

---

---

---

---

- 2.d.ii. ☐ **S** Submit the Technical Analyses Addendum (Form 600-TAA).

- 2.e. ☒ **Y** ☐ **N** Did you elect in Question 1 for Department technical analyses to be used for criteria assessment? **If no:**

2.e.i. ☐ **S** Submit the technical analyses.

## **APPLICATION ADDENDA AND REVIEW**

3. ☐ **S** ☒ **NA** If your application is for groundwater, not surface water, and one or more of your points of diversion are in a Basin Closure Area, then submit the Basin Closure Area Addendum (Form 600-BCA).
4. ☐ **S** ☒ **NA** If your application is for groundwater and one or more points of diversion are in a Basin Closure Area, then your project must have a Hydrogeologic Report that conforms with MCA 85-2-361 to comply with the requirements of § 85-2-360, MCA. A Hydrogeologic Report Addendum (Form 600-HRA) or Department Technical Analyses may be used to meet these requirements. Please mark the box below that best applies, then select "S" if submitting a Hydrogeologic Report or "NA" if one is not required. This question does not apply to surface water points of diversion in a Basin Closure Area.
- ☐ If you elected to conduct Technical Analyses, you must submit the Hydrogeologic Report Addendum (Form 600-HRA).
  - ☐ If you elected for DNRC to conduct Technical Analyses but did not have a preapplication meeting AND complete a Form 600P Permit Preapplication Meeting Form (or changes have occurred since the completed Form 600P), you must submit the Hydrogeologic Report Addendum (Form 600-HRA).
  - ☐ If you elected for DNRC to conduct Technical Analyses, had a preapplication meeting, completed a Form 600P, and the Technical Analyses remain unchanged since the preapplication meeting, you do not need to submit Form 600-HRA because the Department's Technical Analyses meet the report requirements of § 85-2-360 and § 85-2-361, MCA.
5. ☐ **S** ☒ **NA** If the project is for one or more groundwater points of diversion located in a Controlled Groundwater Area, then submit the Controlled Groundwater Area Addendum (Form 600-CGWA).
6. ☐ **S** ☒ **NA** If the project involves an appropriation that is greater than 5.5 CFS and 4,000 acre-feet, then submit a Criteria Addendum Application for Beneficial Water Use Permit for Appropriations Greater than 5.5 CFS and 4,000 AC-FT (Form 600-B).
7. ☐ **S** ☒ **NA** If the project involves out-of-state water use, then submit the Out-of-State Use Addendum (Form 600/606-OSA).
8. ☐ **S** ☒ **NA** If you require mitigation water to meet the criteria of issuance, then submit a Mitigation Purpose Addendum (Form 600/606-MIT).
9. ☐ **S** ☒ **NA** If the proposed purposes include marketing or selling water, (not marketing for mitigation/aquifer recharge), then submit the Marketing Purpose Addendum (Form 600/606-WMA).
10. ☐ **S** ☒ **NA** If the project involves one or more places of storage, then submit a Permit Storage Addendum (Form 600-SA). This does not include reservoirs, pits, pit-dams, or ponds with a capacity less than 0.1 AF; water tanks; or cisterns (ARM 36.12.113(6)).
11. ☐ **S** ☒ **NA** If the project is in designated sage grouse habitat, then submit a review letter from the Montana Sage Grouse Habitat Conservation Program.
12. ☐ **S** ☒ **NA** If the project includes a point of diversion and/or place of use on State of Montana Trust Land, submit documentation of consent from the DNRC Trust Lands Management Division.
13. ☐ **S** ☒ **NA** You must provide a written notice of the application to each owner of an appropriation right sharing a point of diversion or means of conveyance (e.g., canal, ditch, flume, pipeline, or constructed waterway) pursuant to §85-2-302(4)(c), MCA. Submit a copy of this notice and the recipient list.

## **PURPOSE AND DIVERSION INFORMATION**

14. ☐ Y ☒ N Is the proposed use temporary?

14.a. If yes, when will the appropriation cease? \_\_\_\_\_

15. Is the proposed source surface water or groundwater? Groundwater

16. What is the source name? deep alluvial aquifer

17. ☒ S Attach a map utilizing an aerial photograph or topographic map that shows the following: section corners; township and range; north arrow; scale bar; all proposed points of diversion labeled with a unique Point of Diversion (POD) ID number and, if applicable, GWIC number; all proposed places of use; all proposed conveyance facilities and or routes; all proposed places of storage labeled with a unique Storage ID number; and places of use (POU) for all overlapping water rights. More than one map may be submitted, if necessary to clearly convey all required information.

18. Fill out the table below. Means of diversion for surface water includes headgate, pump, dam, and others. Means of diversion for groundwater includes well, developed spring, pit pond, and others.

| Purpose                             | Means of Diversion | Acres Irrigated (if appl.) | Period of Diversion (Month/Day - Month/Day) | Period of Use (Month/Day - Month/Day) | Flow Rate<br><input type="checkbox"/> GPM<br><input type="checkbox"/> CFS | Volume (Acre-Feet) |
|-------------------------------------|--------------------|----------------------------|---------------------------------------------|---------------------------------------|---------------------------------------------------------------------------|--------------------|
| Institutional                       | Well               |                            | 1/1 - 12/31                                 | 1/1 - 12/31                           | 94                                                                        | 1.62               |
| Lawn & Gargden                      | Well               | 3.5                        | 4/20 - 10/10                                | 4/20 - 10/10                          | 94                                                                        | 8.75               |
|                                     |                    |                            |                                             |                                       |                                                                           |                    |
|                                     |                    |                            |                                             |                                       |                                                                           |                    |
|                                     |                    |                            |                                             |                                       |                                                                           |                    |
| Total Flow Rate and Volume Required |                    |                            |                                             |                                       | 94                                                                        | 10.37              |

19. ☐ Y ☒ N Does the proposed use include on or more of the following purposes: domestic, multiple domestic, stock, or irrigation? If yes, fill out the table below, where applicable.

| Purpose                       | Requested Information                                                                                                                                                                 | Response       |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| Domestic or multiple domestic | Number of households and bedrooms served per household                                                                                                                                | Not Applicable |
| Stock                         | Number of animal units                                                                                                                                                                | Not Applicable |
| Irrigation                    | Method of irrigation type (sprinkler or flood) and subtype (if flood: level border, graded border, furrow, contour ditch, or other; if sprinkler: center pivot, wheel line, or other) | Sprinkler      |
| Irrigation (flood only)       | Design slope                                                                                                                                                                          | Not Applicable |

## POINT(S) OF DIVERSION

20. Describe the proposed location of the point(s) diversion to the nearest  $\frac{1}{4}$   $\frac{1}{4}$   $\frac{1}{4}$  Section. Label each POD with the POD ID number used for the project map (question 17).

| POD # | $\frac{1}{4}$ | $\frac{1}{4}$ | $\frac{1}{4}$ | Sec. | Twp. | Rge. | County   | Lot | Block | Tract | Subdivision | Gov. Lot |
|-------|---------------|---------------|---------------|------|------|------|----------|-----|-------|-------|-------------|----------|
| 1     | NW            | SE            | SW            | 33   | 29N  | 20W  | Flathead |     |       | TR 2  |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |
|       |               |               |               |      |      |      |          |     |       |       |             |          |

## PLACE OF USE

21. What are the geocodes of the place of use?

|                         |  |
|-------------------------|--|
| 07-4079-33-3-01-05-0000 |  |
|                         |  |
|                         |  |
|                         |  |

22. Describe the legal land description for the proposed place of use and, if applying for an irrigation or lawn and garden purpose, list the number of irrigated acres.

| Acres | Gov. Lot | Block | $\frac{1}{4}$ | $\frac{1}{4}$ | $\frac{1}{4}$ | Sec. | Twp. | Rge. | County   |
|-------|----------|-------|---------------|---------------|---------------|------|------|------|----------|
| 3.5   |          |       |               | SE            | SW            | 33   | 29N  | 20W  | Flathead |
|       |          |       |               |               |               |      |      |      |          |
|       |          |       |               |               |               |      |      |      |          |
|       |          |       |               |               |               |      |      |      |          |
|       |          |       |               |               |               |      |      |      |          |
|       |          |       |               |               |               |      |      |      |          |
|       |          |       |               |               |               |      |      |      |          |

## **SUPPLEMENTAL AND OVERLAPPING WATER RIGHTS**

23. ☐ Y ☒ N Will other water rights supplement or overlap the place of use to contribute to the purpose(s)?

23.a. If yes, summarize how the supplemental and proposed water rights will be operated as a whole to serve the purpose(s).

---

---

---

---

---

---

24. For each supplemental or overlapping water right, please list the water right number, typical period of diversion and use (MM/DD-MM/DD), flow rate (GPM or CFS), and the volume of water (AF) contributed to the shared place of use.

| Water Right # | Average Period of Diversion | Average Period of Use | Flow Rate | Volume Contributed |
|---------------|-----------------------------|-----------------------|-----------|--------------------|
|               |                             |                       |           |                    |
|               |                             |                       |           |                    |
|               |                             |                       |           |                    |
|               |                             |                       |           |                    |
|               |                             |                       |           |                    |

25. ☐ Y ☒ N Will this application supplement contract water from a Federal Project, ditch company, or other source?

25.a. If yes, explain.

---

---

---

---

---

## **ADVERSE EFFECT**

26. Explain how you can control your diversion in response to a call being made.

The valves to the irrigation system can be closed and the pump can be shut off in response to a call from a senior appropriator.

---

---

---

---

---

27. Describe any plans you have for ensuring existing water rights will be satisfied during times of water shortage.

1. Reduce irrigation application to 50 percent during shortage. 2. Reduce irrigation application to 25 percent during times of intense shortage. 3. The pump will be turned off if a valid call is made by a senior appropriator. Water for institutional use can be purchased in the event of extreme water shortage.

---

---

---

---

---

28. ☐ Y ☒ N Are you aware of any calls that have been made on the source of supply or, if groundwater, on nearby surface water sources?

28.a. If yes, explain.

---

---

---

---

29. ☐ Y ☒ N Does a water commissioner distribute water or oversee water distribution on your proposed source?

29.a. If yes, list the source(s).

---

---

---

30. ☐ Y ☒ N Do other water rights share any of the proposed points of diversion?

30.a. If yes, describe how the proposed project will not adversely affect these water rights.

---

---

---

---

---

31. ☐ Y ☒ N Do other water rights share any conveyance infrastructure associated with the proposed project?

31.a. If yes, describe how the proposed project will not adversely affect these water rights.

---

---

---

---

---

## **ADEQUATE MEANS OF DIVERSION AND OPERATION**

32. ☒ **S** Submit a diagram of how you will operate your system from all proposed points of diversion to all proposed places of use.

33. Describe specific information about the capacity of all proposed diversionary structures. This may include, where applicable: pump curves and total dynamic head calculations, headgate design specifications, and dike or dam height and length.

A Grundfos Model 150S200-9 submersible pump equipped with a Grundfos MS600QFT40 submersible motor will be installed in the well. The pump specification with pump curve and the submersible motor specification are provided as Attachment A. Jakola Engineering prepared total dynamic head (TDH) calculations for the system, provided as Attachment B. The TDH calculations include a maximum pumping water level (PWL) of 220 feet, the aquifer test indicates that this is a significantly deeper water level than will be encountered during system operations. However, the system will operate utilizing a VFD. Based on Jakola's calculations provided as Attachment C the system will not exceed a demand of 94 GPM.

34. Describe the size, materials, capacity, and configuration of infrastructure to convey water from all proposed points of diversion to all proposed places of use. This may include but is not limited to, pipelines and ditches. Include a description of any losses related to the proposed conveyance. Ditch conveyance losses may be estimated numerous ways, which include a ditch loss rate or Department standard methods.

Water will be diverted from the well via a submersible pump controlled by a VFD and two pressure tanks. Water will be conveyed from the well via 3-inch diameter galvanized drop pipe and into a buried 3-inch HDPE supply line as shown on sheet C122. No losses are anticipated with conveyance. The irrigation system had not yet been designed. However, a 3-inch HDPE connection point will be provided for the irrigation system per the design plans (see figure C-502). The irrigation system will consist of an in-ground programmable system. Irrigation will not occur at the same time as a church event and irrigation will be zoned to result in a flow rate less than 94 GPM. Attachment C includes an irrigated area map.

35. Describe how the proposed diversion and conveyance infrastructure can provide the required flow and volume, for the purposes plus any conveyance losses and storage, throughout the proposed period of diversion.

No losses are associated with conveyance as buried HDPE piping will be utilized for conveyance. The proposed pump, motor, VFD, pressure tank, and other system controls are capable of providing the requisite flow rate and associated annual volume. The pump will be set at a sufficient depth (225' BGS per Attachment B) to ensure that water will remain above the pump, available to divert during year-round operations. The fire suppression system will source water from a 30,000 gallon in-ground storage tank. No losses are anticipated associated with this storage tank.

36. Provide a plan of operations, which includes specific information about how water is delivered within the place of use. This may include, where applicable, the range of flow rates needed for a pivot. Water will be diverted from the well via a submersible pump controlled by a VFD and two pressure tanks. The VFD and pressure tanks will operate in tandem to maintain system pressure, providing water to the church on an as-needed basis. From the maintenance building, water is distributed to the church building via buried pipeline. Irrigation will occur outside of church service hours. Irrigation will be limited to the irrigation season of 4/20 through 10/10. The irrigation system has not yet been designed, but it will consist of an in-ground automated system. Zones will be designed to operate at a flow rate of 94 GPM or less.

37. ☐ Y ☒ N Does the proposed conveyance require easements?

37.a. If yes, explain.

38. ☒ Y ☐ N Do you own the land where all proposed points of diversion are located?

38.a. ☐ S If no, submit documentation to show you have the right to use all points of diversion located on each property you do not own. This may include, but is not limited to, a well agreement, an easement, or permission of the party that owns the property where the proposed point(s) of diversion are located.

39. ☐ Y ☒ N Will your system be designed to discharge water from the project?

IF YES,

39.a. Explain the wastewater disposal method.

They system will not discharge water. However, wastewater will be disposed via the proposed on site septic system. Septic system details are provided in sheets C-121 and C-122.

39.b. ☐ Y ☐ N ☒ NA Have the necessary permits been obtained to comply with §§ 75-5-410 and 85-2-364, MCA?

40. ☒ Y ☐ N Do you have any plans to measure your diversion and use?

40.a. If yes, describe the plan and the type of measurements you will take.

Plan specifications for the pump house include a 3" Neptune turbine flow meter (or equivalent).

41. ☒ Y ☐ N Is the means of diversion for any proposed point of diversion a well?

IF YES,

41.a. ☒ Y ☐ N Have all wells been drilled?

41.b. For all wells that have been drilled, what is the name of the well driller and, if available, what is their license number?

Martin Wilson - Coldwater Drilling and Pumps , License No: WWC - 624

41.c. ☐ Y ☐ N For all wells yet to be drilled, will a licensed well driller construct the wells?

41.d. ☒ S ☐ NA Submit any well logs not yet submitted to the Department.

## **BENEFICIAL USE**

42. ☒ Y ☐ N Does the Department have a volume, period of diversion, or period of use standard for the purposes for which water is proposed? Department standards can be found in the DNRC Water Calculation Guide, ARM 36.12.112, and ARM 36.12.115.

42.a. ☒ Y ☐ N If yes, do all proposed beneficial uses fall within Department standards?

42.b. If no Department standard exists, or if any proposed beneficial use falls outside of Department standards, explain how the requested flow rate and volume are reasonable for the purpose. Institutional use volumes were calculated utilizing standards established in DEQ Circular 4, Table 3.1-1. Irrigation volumes were calculated utilizing 2.5 acre-feet per acre per annum as specified in ARM 63.12.115.

43. ☒ Y ☐ N Will your proposed project be subject to DEQ requirements for a public water supply (PWS) system or Certificate of Subdivision Approval (COSA)?

44. ☐ Y ☒ N Are you proposing to use surface water for in-house domestic use?

44.a. ☐ Y ☐ N If yes, does a COSA exist for the proposed place of use?

44.a.i. ☐ S ☐ NA If yes, please submit the COSA.

44.a.ii. ☐ Y ☐ N If no, have you researched or consulted with DEQ regarding their requirements?

## **POSSESSORY INTEREST**

45. ☐ Y ☒ N Do you meet one of the exceptions to possessory interest requirements, pursuant to ARM 36.12.1802? Exceptions include cases where the application is for sale, rental, distribution, or is a municipal use, or in any other context in which water is being supplied to another and it is clear that the ultimate user will not accept the supply without consenting to the use of water on the user's place of use.

45.a. If yes, explain.

---

---

---

---

46. ☒ Y ☐ N ☐ NA Do you own all proposed places of use? Mark "NA" if you meet one of the exceptions to the possessory interest requirement.

IF NO,

- 46.a. ☒ S Explain and submit documentation that shows you either have possessory interest or written permission of the parties with possessory interest of the place of use.

Documentation of possessory interest is provided in Attachment D and includes the Montana Cadastral property record card, as well as the Old Apostolic Lutheran Church (OALC) bylaws and Articles of Incorporation, which document that Brian Wantaja serves as Chairman of the Board of the OALC of Lakeside and, in that capacity, holds signatory authority on behalf of the organization.

---

---

- 46.b. ☒ Y ☐ N Would you like the water right to be appurtenant to the land? Please note that if your water right is not appurtenant to land it will not transfer by default with the conveyance of the property, pursuant to § 85-2-403, MCA.

46.b.i. If no, explain.

---

---

---

## **PROPOSED COMPLETION PERIOD**

47. How much time will be needed to complete this project and to submit to the DNRC a Project Completion Notice (Form 617)? 5 years

48. Please describe why this amount of time is needed to complete this project.

This will allow construction to be completed and landscaping to be planted and established.

---

---

## **AFFIDAVIT & CERTIFICATION**

Read carefully before you sign and review with legal counsel if you have any questions. All owners (or trustees) must sign the form. *\*\*If the owner is a business or trust, include the title of the representative(s) signing the form (i.e., president, trustee, managing partner, etc.) and provide documentation that establishes the authority of the representative to sign the application.*

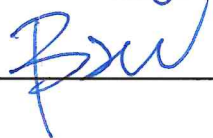

I affirm the information provided for this application is to the best of my knowledge true and correct. If a preapplication meeting form was submitted, I am aware that my application for this project will not qualify for a discounted filing fee and expedited timelines if upon submittal of the application to the Department, I changed any element of the proposed application from the preapplication meeting form and follow-up materials (ARM 36.12.1302(6)(a)).

I affirm I have possessory interest, or the written consent of the person with the possessory interest, in the property where the water is to be put to beneficial use, unless this application meets an exception to the possessory interest requirements in ARM 36.12.1802(1)(b).

I understand that making a false statement under oath or affirmation in this application and official proceedings throughout the examination of my application may subject me to prosecution under § 45-7-202, MCA, a misdemeanor punishable by a jail term not to exceed 6 months or a fine not to exceed \$500, or both. I have read this Affidavit and understand the terms and conditions.

I declare under penalty of perjury and under the laws of the state of Montana that the foregoing is true and correct.

Product No.: 13B60009

Pump without motor

Multi-stage submersible pump for raw water supply, groundwater lowering and pressure boosting. The pump is suitable for pumping clean, thin, non-aggressive liquids without solid particles or fibres.

**Liquid:**

Pumped liquid: Water  
Liquid temperature range: 5 .. 140 °F  
Selected liquid temperature: 68 °F  
Density: 62.29 lb/ft³

**Technical:**

Pump speed on which pump data are based: 3450 rpm  
Actual calculated flow: 95.2 US GPM  
Rated flow: 159 US GPM  
Resulting head of the pump: 406.4 ft  
Rated head: 318.3 ft  
Approvals: CULDWUS,CCSAUS  
Approvals for drinking water: PROP65  
Curve tolerance: ISO9906:2012 3B  
Return valve: YES

**Materials:**

Pump: Stainless steel  
EN 1.4301  
AISI 304  
Impeller: Stainless steel  
EN 1.4301  
AISI 304

**Installation:**

Maximum operating pressure: 870.23 psi  
Maximum outlet pressure: 152.29 psi  
Type of connection: NPT(F)  
Size of connection: 3 inch  
Motor diameter: 6 inch  
Minimum borehole diameter: 5.71 in

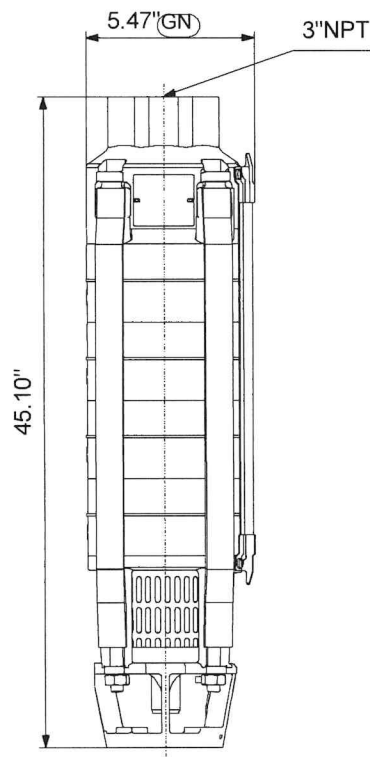

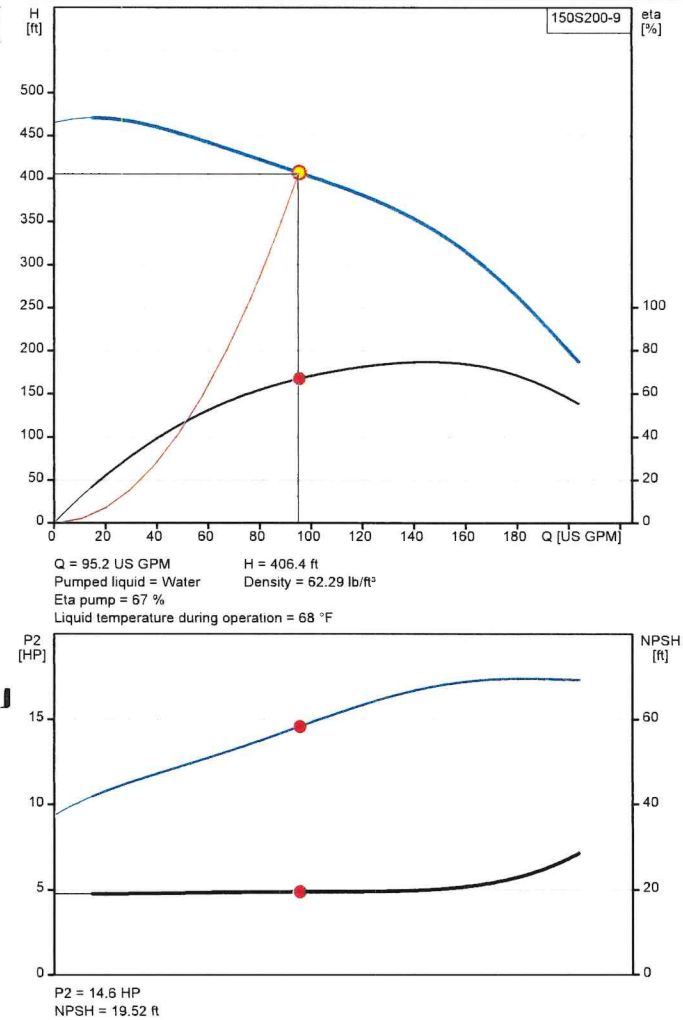

**Electrical data:**

Motor flange design: Grundfos  
Power (P2) required by pump: 20 HP

**Others:**

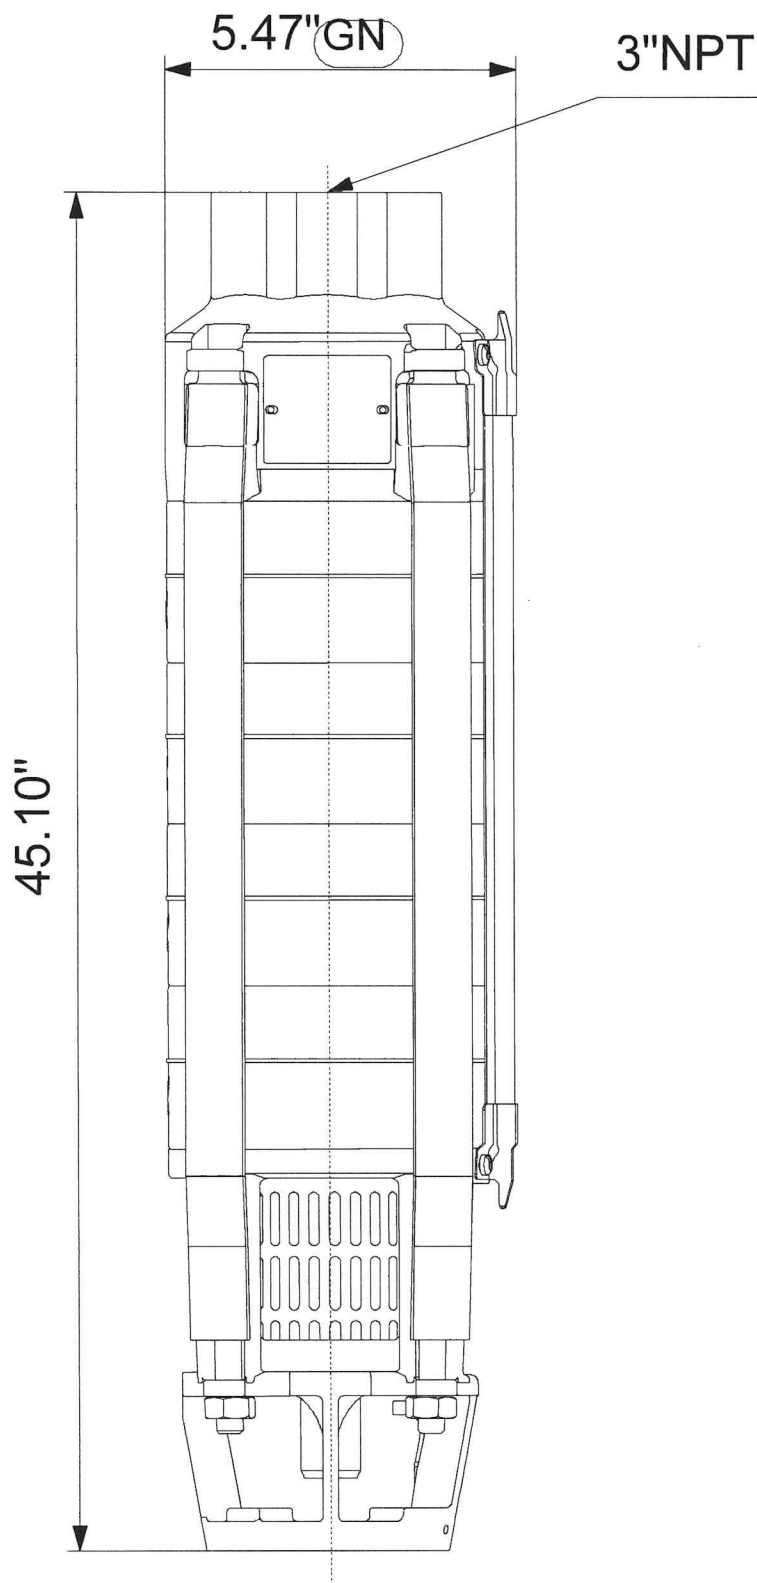

Minimum efficiency index, MEI ≥: --  
DOE Pump Energy Index CL: 0.91  
Net weight: 47.6 lb  
Gross weight: 57.3 lb  
Shipping volume: 1.84 ft³  
Country of origin: US  
Custom tariff no.: 8413.70.2004

Well Pump TDH Calculations

Date: 2/20/2025

Revised 6/28/2025

By: Garret Muonio

### Equations

$TDH = E_h + h_f + \text{System Pressure}$

$h_f = 0.002083L (100/C)^{1.85} (Q^{1.85}/D_i^{4.87})$

### Variables

|                          |                                       |
|--------------------------|---------------------------------------|
| swl (ft)                 | 30 (below top of casing)              |
| pwl (ft)                 | 220 (below top of casing)             |
| Pump Lift (ft)           | 220 (pwl)                             |
| Pump Set Depth (ft)      | 225                                   |
| Di (in) Drop Pipe        | 3.068 (3" galvanized steel)           |
| system pressure (psi)    | 65                                    |
| Transport Length (ft)    | 350 (From site plan well-mech-church) |
| Di (in) transport        | 2.675 (3" PE DR9)                     |
| Mech Rm Pipe length (ft) | 50                                    |
| Di (in) Interior Pipe    | 2.945 (3" copper type L)              |
| Elevation (ft)           | 8 (From site plan; well to Bldg)      |
| C                        | 140 (Hazen Williams Coef)             |

## Summary

### Primary Information

Property Category: RP

Subcategory: Non-Qualified Ag

Geocode: 07-4079-33-3-01-05-0000

Assessment Code: 0000320500

#### Primary Owner:

OLD APOSTOLIC LUTHERAN CHURCH OF LAKESIDE MT  
PO BOX 854  
KALISPELL, MT 59903-0854  
Note: See Owners section for all owners

#### Property Address:

Certificate of Survey: 9655

Legal Description: S33, T29 N, R20 W, C.O.S. 9655, ACRES 26.53, TR 2 IN SE4SW4

Last Modified: 9/22/2025 11:52:13 AM

**Old Apostolic Lutheran Church of Lakeside, Montana**  
**Amended and Restated Bylaws**

**ARTICLE I – NAME**

The name of the organization is the “Old Apostolic Lutheran Church of Lakeside, Montana” hereinafter referred to as “the Church”.

**ARTICLE II – LOCATION AND AFFILIATION**

The Church, located at 215 Blacktail Road, Lakeside, MT 59922 is a member congregation of the Old Apostolic Lutheran Church of America, incorporated in the state of Minnesota, hereinafter referred to as “the National Church”.

**ARTICLE III – TENETS**

The tenets of this church shall be as set forth in the Constitution of the National Church, namely: The belief in the Trinity of God, the Father, The Son and the Holy Ghost; belief in the Holy Bible, the Old and the New Testaments, to be the only immutable word of God unto salvation and the Standard by which the doctrine of salvation must be determined, the acknowledgement of the Apostles’ Creed, the Nicene Creed, the Athanasian Creed, the Unaltered Augsburg Confession and Apology, the Smalcald Articles and Martin Luther’s Small and Large Catechisms.

Lars Levi Laestadius, in our time, has brought forth the same doctrine that we find in these documents of faith.

**ARTICLE IV – MEMBERSHIP**

- A. The membership consists of all those believing and confessing the tenets (as set forth in Article III) who pay membership dues of ten dollars (\$10.00) per year, and who in other ways support the church.
- B. However, these bylaws are for the purpose of creating and maintaining the existence of an entity for the carrying on of temporal affairs of the Church, and as such confine the definition of the term “member” and “membership” to mean only those qualified to vote at the meetings of the membership. Voters shall be eighteen years of age and over who have paid the required monetary dues at least twelve months immediately prior to voting.
- C. Donations by non-members shall be accepted as gifts without further recognition.

**ARTICLE V – TRUSTEES**

- A. The membership shall elect a Board of Trustees, herein call the “Trustees.” The Board shall be composed of nine (9) trustees, all of whom shall be members of the Church, each elected to a term of three (3) years. In the Trustees is vested all control of the Church and of the caretaking of the affairs of the Church except as provided in Article III of the Amended and Restated Articles of Incorporation for the Church. Upon the affirmative

**Old Apostolic Lutheran Church of Lakeside, Montana**  
**Amended and Restated Bylaws**

vote of a majority of the Trustees, they shall have the power to perform any and all acts pertaining to the business of the Church not inconsistent with these Bylaws and the Amended and Restated Articles of Incorporation.

- B. A nominee for the office of Trustee shall have been a member of the Church for a minimum of twelve months immediately prior to this nomination.
- C. Each Trustee shall have one vote.
- D. Trustees shall be subject to recall and replacement by a majority vote of the Church's members at any duly called and held membership meeting.

**ARTICLE VI – MEMBERSHIP MEETING**

- A. Annual Membership Meeting: The annual meeting shall be held on the first Sunday of May at the Church building, which meeting shall be announced to the congregation on the two preceding Sundays. Those voting members in attendance will constitute a quorum. Voting members shall nominate and elect by majority vote, qualified candidates to fill each of the vacant or expired Trustee positions, and a delegate and alternate delegate to the annual business meeting of the National Church. The election shall be by written ballot whenever two or more candidates are nominated for a single position. The meeting shall also include a Treasurer's report and other necessary business. The minutes of the Annual Membership Meeting shall be read to the congregation as soon as practical.
- B. Special Membership Meetings: The Board of Trustees may call for a special meeting of the membership at any time by announcing said meeting and purpose to the Church congregation on the Sunday preceding the date of the meeting. However, in the event the meeting would be called to consider an office of the church or to consider amending the Church bylaws, there shall be announcements of said meeting on the two preceding Sundays, stating the purpose, time, and place of the meeting. Those voting members in attendance shall constitute a quorum. The Chairman of the Trustees shall preside over all such special membership meetings, which shall include only those items of business which, in the opinion of the Trustees, need to be considered before the next Annual Membership Meeting. The minutes of the Special Membership Meeting shall be read to the congregation as soon as practical.
- C. Trustees meetings: The Trustees shall meet for reorganization as soon as practical after the Annual Membership Meeting. At this reorganization meeting they shall elect from among their members a Chairman, Assistant Chairman, Secretary, Assistant Secretary, Treasurer, and Assistant Treasurer. The Trustees thus elected shall be the officers of the Church, and shall serve in their capacities and with responsibilities set out in Article VII herein. The minutes of the Trustees' reorganization meeting shall be read to the congregation as soon as practical. The Trustees shall also meet, in addition to the annual Trustee meeting, from time to time when called by the Chairman or a majority of the Trustees.

**Old Apostolic Lutheran Church of Lakeside, Montana**  
**Amended and Restated Bylaws**

**ARTICLE VII – OFFICERS**

- A. Chairman: He shall preside over all meetings, both of the membership and of the Trustees. He shall appoint auditors, ballot inspectors, and other positions as directed by the membership at its meeting, or by the Trustees, and shall announce or arrange the announcement of all meetings and reports to be made to the membership.
- B. Assistant Chairman: He shall assist the Chairman and assume his duties in his absence.
- C. Secretary: He shall be the recording officer of all business meetings and custodian of all Church records except the Treasurer's books and the Minister's records. He shall keep minutes of meetings, both of the membership and of the Trustees, which minutes shall be a permanent record.

The Secretary shall furnish the delegate to the annual meeting of the Old Apostolic Lutheran Church of America with a letter of authorization; also a letter of those instructions approved by the Church's congregation, if any.

He shall take care of correspondence as directed by the membership through meetings and the Trustees.

He shall serve as the Registered Agent of the Corporation (Church).

He shall provide the Board of Trustees with a copy of the minutes of the annual business meeting, or any special meetings, of the National Church so they can be read to the congregation.

- D. Assistant Secretary: He shall assist the Secretary and in his absence assume the duties of that office.
- E. Treasurer: He shall be responsible for receiving, recording, and safekeeping all funds given or belonging to the Church. He shall oversee all financial transactions, maintain bank accounts, prepare financial reports and provide a full and accurate account of all receipts and disbursements.

The Treasurer shall maintain a permanent record of all dues paid and the members enrolled thereby. He shall prepare a financial report which he shall present at the annual membership meeting after it is audited and approved by two auditors appointed by the Chairman.

- F. Assistant Treasurer: He shall serve with and assist the Treasurer and in his absence assume the duties of that office.

**Old Apostolic Lutheran Church of Lakeside, Montana  
Amended and Restated Bylaws**

**G. Delegate to the Annual Meeting of the National Church:**

At the Annual Membership Meeting, the membership shall elect a delegate, and one alternate delegate, to represent the congregation at the annual business meeting of the Old Apostolic Lutheran Church of America, carrying the credentials provided by the Secretary and presenting the business as directed by the congregation and acting on its behalf on any other business to the best of his ability.

Candidates for delegate and alternate delegate shall possess the same qualifications as a candidate for Trustee.

He shall report back to the Board of Trustees with any items from the annual business meeting of the National Church that requires action.

**ARTICLE VIII – PASTOR**

The congregation shall elect a Pastor (or Pastors), herein also called “Minister” at a membership meeting. The term of his office shall be at the discretion of the congregation. The Minister(s) may perform Baptisms, Marriages, and Funerals at the discretion of the congregation, and shall keep a permanent record of each.

A Minister may be elected to serve as Trustee.

**ARTICLE IX – REVIEWING AND AMENDING BYLAWS**

The Secretary shall keep a copy, or copies, of these Bylaws at the Church building and shall make them available upon the request of any member of the Church. These Bylaws shall not be changed or amended except by an affirmative vote of two-thirds (2/3) of the ballots cast at any Annual Membership Meetings or at any Special Membership Meeting duly called and held for that purpose. However, the provision of Article III shall be as set forth in Article III of the Constitution of the National Church.

**ARTICLE X – DISSOLUTION**

In the event that the membership of the Church becomes fewer than the number constituting the Board of Trustees, the control of all the property and affairs of the Church shall be assumed by the National Church, and the remaining Trustees of the Church shall assist the National Church to dispose of the property of the Church as set forth in the Constitution of the National Church, and in compliance with the laws of the State of Montana.

**ARTICLE XI – INDEMNIFICATION**

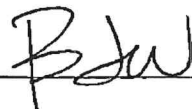

Pursuant to and in accordance with Section 35-2-447, Montana Code Annotated, The Old Apostolic Lutheran Church of Lakeside, Montana hereby covenants and agrees that it shall indemnify its Trustees, Officers, and Ministers, to the fullest extent permitted under Montana

**Old Apostolic Lutheran Church of Lakeside, Montana  
Amended and Restated Bylaws**

State law, all as further set forth in Part 4 of Chapter 2 of Title 35 of the Montana Code Annotated.

DATED this 28 day of May 2024.

OLD APOSTOLIC LUTHERAN CHURCH  
OF LAKESIDE, MONTANA

By   
Brian Wantaja, Chairman  
Of Board of Trustees

ATTEST:

By   
Andy Homola, Trustee

THE UNDERSIGNED Secretary of Board of Trustees of the Old Apostolic Lutheran Church of Lakeside, Montana ("Corporation") hereby states and certifies that the foregoing Amended and Restated Bylaws, at a duly called and noticed meeting of the members of the Corporation ("Church"), were duly approved and adopted by a vote of the members of the Church. The undersigned further certifies that the members unanimously, without dissent, approved and adopted these Amended and Restated Bylaws and further certifies that such Amended and Restated Bylaws were also duly approved by a majority of the Church's then serving Trustees on its Board of Trustees.

DATED this 28 day of May 2024.

  
Todd Tonjum, Secretary

**Old Apostolic Lutheran Church of Lakeside, Montana**  
**Amended and Restated Articles of Incorporation**

Article I  
(Name & Affiliation)

The name of this Corporation shall be the "Old Apostolic Lutheran Church of Lakeside, Montana", incorporated in Montana, hereinafter referred to as "the Church", and it is and shall be a member of the Old Apostolic Lutheran Church of America, incorporated in Minnesota, hereinafter referred to as "the National Church". The duration of this Corporation shall be perpetual.

Article II  
(Powers & Purposes)

This Corporation shall be a religious Corporation, and the objects, purposes and powers of the Corporation shall be:

- A. The tenets of this church shall be as set forth in the Constitution of the National Church, namely: The belief in the Trinity of God, the Father, The Son and the Holy Ghost; belief in the Holy Bible, the Old and the New Testaments, to be the only immutable word of God unto salvation and the Standard by which the doctrine of salvation must be determined, the acknowledgement of the Apostles' Creed, the Nicene Creed, the Athanasian Creed, the Unaltered Augsburg Confession and Apology, the Smalcald Articles and Martin Luther's Small and Large Catechisms. Lars Levi Laestadius, in our time, has brought forth the same doctrine that we find in these documents of faith.
- B. The purpose of this Corporation is to take charge of and manage all temporal affairs of the Church, and manage all property, personal and real, to erect a building for religious purposes and to rent or buy or otherwise acquire real and personal property for such purposes; to affiliate itself with other corporations or local bodies or organizations having the same faith, discipline, rules and usages; to contribute towards its support and maintenance and for the said purpose of its existence, together with all like or analogous powers and privileges, including the borrowing and lending of funds.
- C. To provide a place for meetings of worship and prayer.
- D. To acquire by gift, purchase, devise or bequest, lease as lessee, exchange, own, hold, develop, operate, sell, assign, transfer, convey, transfer upon trust, exchange, lease as lessor, mortgage, pledge or otherwise dispose of and encumber real and personal property of every class and description, including shares of stock, bonds and securities of other Corporations, and rights and privileges therein as may be appropriate, suitable and necessary to the proper and effective conduct of said Corporation.

**Old Apostolic Lutheran Church of Lakeside, Montana  
Amended and Restated Articles of Incorporation**

- E. To enter into, make, perform and carry out contracts of every sort and kind which may be necessary or convenient for the business of this Corporation, with any firm, person, Corporation, private, public or municipal body politic, any state, territory or municipality of the United State of America or foreign government, colony or body politic.
- F. To do any and all things necessary, suitable, convenient or proper for or in connection with or incidental to the accomplishment of any of the purposes herein enumerated and in general to do any and all things and exercise any and all powers which it may be lawful, now or hereafter, for the Corporation to do or to exercise under the laws of the State of Montana that may now or hereafter be applicable to this Corporation.
- G. To act as trustee under any trust incidental to the principal objects of the Corporation, and to receive, hold, administer and expend funds and property subject to such trust.
- H. This Corporation is organized as a not for profit and does not contemplate pecuniary gain to the members thereof.

**Article III  
(Members)**

The Corporation shall have members and the membership shall consist of those members who are recognized as members of the Corporation in accordance with that which is set forth and provided for in the Corporation's Bylaws. The members shall elect the Board of Trustees and may amend these Articles of Incorporation pursuant to and in accordance with that which is provided for in Article VI hereof, and may amended the Corporation's Bylaws in accordance with that which is provided for therein. The members shall also vote on such other matters as may be presented to the membership by the Board of Trustees in accordance with the bylaws.

**Article IV  
(Board of Trustees)**

The business affairs of this Corporation shall be conducted by a Board of Trustees ("Trustees"). Except as provided for in Article III hereof, all right to act on behalf of the Corporation shall be vested in the Trustees, acting by majority decision unless the Bylaws call for a different percentage.

**Article V  
(National Church as Successor)**

In the event that the membership of the Church becomes fewer than the number constituting the Board of Trustees, the control of all the property and affairs of the Church shall be assumed by the National Church, and the remaining Trustees of the Church shall assist the National Church

**Old Apostolic Lutheran Church of Lakeside, Montana  
Amended and Restated Articles of Incorporation**

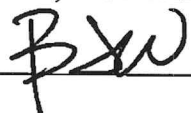

to dispose of the property of the Church as set forth in the Constitution of the National Church, and in compliance with the laws of the State of Montana.

Article VI  
(Amendment)

Amendments to these Articles of Incorporation may be made by an affirmative vote of two-thirds (2/3) of the ballots cast at any Annual Membership Meetings or at any Special Membership Meeting duly called and held for that purpose. However, the provision of Paragraph A of Article II shall be as set forth in the Article III of the Constitution of the National Church.

DATED this 29<sup>th</sup> day of January 2024.

**Subject: Complete Technical Analysis Report for Beneficial Water Use Permit Preapplication No. 76LJ 30170796**

Dear Applicant,

As designated on the submitted Preapplication Meeting Form per §85-2-302(3)(b), MCA, the Department of Natural Resources and Conservation (DNRC or Department) has completed the technical analyses for Beneficial Water Use Permit Preapplication No. 76LJ 30170796 based on the information provided in your Preapplication Meeting Form accepted by the Department on June 5, 2025. The technical analyses can be found in the attached report. Please note this Beneficial Water Use Permit Preapplication Technical Analyses Report is a two-part publication, comprised of a Part A completed by Water Sciences Bureau staff, and a Part B completed by Kalispell Regional Office staff.

This Technical Analyses Report IS: A collection of facts that the DNRC has gathered, including content provided in the Preapplication Meeting Form materials. The Department will use these data to analyze the criteria in §85-2-311, MCA if you submit an application for the project described in the completed Preapplication Meeting Form.

This Technical Analyses Report IS NOT: An analysis or discussion of whether the Preapplication Meeting Form as filed meets the criteria (§85-2-[311], MCA).

**You have 180 days to submit the Beneficial Water Use Permit Application Form 600 considering the information provided in the technical analysis and Preapplication Meeting Form.** If the Application Form is not submitted to the Kalispell Regional Office by January 17, 2026, a new preapplication meeting will be required to process the Application with expedited timelines (ARM 36.12.1302(6)(b)). If any elements described in the submitted Application are changed from that of the submitted Preapplication Meeting Form, the discounted filing fee and expedited timelines will not apply (ARM 36.12.1302(6)(a)). Please note that the technical analyses will expire one year from the date of this letter (ARM 36.12.1302(8)).

Please let me know if you have any questions.

Best,

Joseph Howerton

### Overview

This report is Part A of a two-part publication which analyzes data submitted by the Applicant in support of the above-mentioned water right application. This report provides technical analyses as required under the Administrative Rules of Montana (ARM) 36.12.1303 in support of the water rights criteria assessment as required in §85-2-311, Montana Code Annotated (MCA). For applications in closed basins, this report fulfills the requirements of MCA 85-2-361.

This Groundwater Permit Technical Analyses Report – Part A contains the following sections:

|                                                                |    |

## 1.0 Executive Summary

### Application Details

The Applicant requests to divert 94 gallons per minute (gpm) up to 10.37 acre-feet (AF) of groundwater from one well for institutional and lawn and garden irrigation purposes. **Table 1** lists the proposed uses and associated periods of diversion/use and diverted volumes. 3.5 acres of lawn and garden would be irrigated.

**Table 1:** Summary of proposed uses, periods of diversion/use, and diverted volume.

| Purpose         | Period of Diversion | Period of Use | Volume (AF) |
|-----------------|---------------------|---------------|-------------|
| Institutional   | 1/1-12/31           | 1/1-12/31     | 1.62        |
| Lawn and Garden | 4/20-10/10          | 4/20-0/10     | 8.75        |

### Approved Variances from ARM 36.12.121

A variance from aquifer test requirements found in ARM 36.12.121 3(a) was granted by the Kalispell Regional Office on May 29, 2025. The reasoning for the requested variances can be found in the WSB Aquifer Testing Addendum Review document dated May 23, 2025. Granting of the variances was recommended because the quality of the data derived from the pump test was sufficient for modeling.

### WSB Technical Findings

Based on information submitted, the WSB estimated aquifer properties, evaluated the production well(s) available water column, quantified the water available in the source aquifer, and evaluated potential impacts to existing groundwater and surface water rights. These technical analyses are in support of the following criteria assessment: adequacy of diversion, physical availability, and adverse effect. A summary of WSB findings described in subsequent sections are listed below.

#### TECHNICAL ANALYSES FINDINGS

|                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AQUIFER TEST ANALYSIS</b> | Using the Neuman-Witherspoon (1969) solution for leaky confined aquifers, saturated thickness (b) of 223 feet (ft), and submitted 24-hour aquifer testing data for Observation Well GWIC ID 296587, estimates of aquifer properties include a Transmissivity (T) of 581 ft <sup>2</sup> /day and a Storativity (S) value of $2.0 \times 10^{-4}$ for the pumped aquifer, a $T_2 = 1,299$ ft <sup>2</sup> /day and $S_2 = 0.04$ for the overlying aquifer, and leakage parameters of $r/B = 2.244 \times 10^{-4}$ , $\beta = 9.377 \times 10^{-5}$ . |
| <b>MODELING INPUTS</b>       | The following aquifer properties were used to complete adequacy of diversion and adverse effect technical analyses: T of 581 ft <sup>2</sup> /day, S of $2.0 \times 10^{-4}$ , $T_2 = 1,299$ ft <sup>2</sup> /day, $S_2 = 0.04$ , $r/B = 2.244 \times 10^{-4}$ , $\beta = 9.377 \times 10^{-5}$ . Pumping schedules used to model each criterion are identified within the document.                                                                                                                                                                |

|                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ADEQUACY OF DIVERSION</b>                           | The aquifer adjacent to GWIC ID 334409/335305 would experience 5.4 ft of drawdown after the first year, leaving approximately 328 ft of available water column above the bottom of the perforated interval.                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>PHYSICAL AVAILABILITY</b>                           | Berglund et al., (2024) estimated an average annual recharge value for the east Flathead Valley basin-fill aquifer system, which totals <u>57,137 AF</u> per year. This value was used to quantify the amount of groundwater physically available. Groundwater water rights that would be evaluated as a legal demand are found in <a href="#">Appendix A</a> ).                                                                                                                                                                                                                            |
| <b>ADVERSE EFFECT (DRAWDOWN IN EXISTING WELLS)</b>     | The 1-foot drawdown contour extends out approximately 900 ft from GWIC ID 334409/335305 at the end of the fifth July of the proposed annual pumping schedule. As such, zero water rights are predicted to experience drawdown equal to or greater than one foot.                                                                                                                                                                                                                                                                                                                            |
| <b>ADVERSE EFFECT (NET DEPLETION TO SURFACE WATER)</b> | <p>Lake Blaine, Flathead River, and Mill Creek are identified as being hydraulically connected to the source aquifer. Monthly net depletions resulting from the proposed use of groundwater are identified in <b>Table 2</b>. The starting points of the depleted reach for Lake Blaine, Flathead River and Mill Creek are as follows, respectively:</p> <ul style="list-style-type: none"><li>• SW of Section 26, Township 29 North, Range 20 West</li><li>• NWSE of Section 35, Township 29 North, Range 21 West</li><li>• SESE of Section 10, Township 28 North, Range 20 West</li></ul> |

**Table 2:** Consumed volume and net depletion to Lake Blaine, Flathead River, and Mill Creek.

| Month        | Consumed Volume (AF) | Lake Blaine Net Depletion (AF) (35%) | Lake Blaine Net Depletion (gpm) | Mill Creek Net Depletion (AF) (28%) | Mill Creek Net Depletion (gpm) | Flathead River Net Depletion (AF) (37%) | Flathead River Net Depletion (gpm) |

## 2.0 Hydrogeologic Setting

The Production Well is identified by Montana Bureau of Mines and Geology (MBMG) Groundwater Information Center (GWIC) IDs [334409](#) and [335305](#) because the well was deepened. Originally, the well was constructed with an 8-inch diameter steel surface casing to a depth extending to 260 ft below ground surface (bgs). The 8-inch casing is perforated from 230 to 260 ft with four rows of 1/8-inch by 1-inch Holte perforator slots (as shown by GWIC ID 334409). The well was deepened (GWIC ID 335305) after the initial construction with a 6-inch casing extending from 260 ft bgs to 400 ft bgs. The 6-inch casing is perforated from 260 to 360 ft bgs by four rows of 1/8-inch by 1-inch Holte perforator slots.

As identified in **Figure 1**, the Production Well is in Tract 2 of the NWSESW of Section 33, Township 29 North, Range 20 West, Flathead County and completed in the alluvial aquifer system known as the Deep Alluvial Aquifer (Pleistocene Alluvium (112ALVM)). The surface of the Deep Alluvial Aquifer is mapped around 200 ft below ground surface near the project location (Smith 2004; Rose, 2018) which agrees with the depth of the sands, gravels and cobbles for GWIC ID 334409/335305. A zone of silt, clay, and gravel of the Deep Alluvial Aquifer system appears to be over 200 ft thick and represents intermediate aquifers near the Production Well (LaFave et al., 2004). The Production Well is within an area of ablation till, an area reworked by glacial melt waters which leaves behind coarse grained sediments (Bergland et al., 2024). Along the mountain front east of the project location, the shallow and deep aquifers are generally interconnected, with decreasing connection towards the middle of the basin (Bergland et al., 2024).

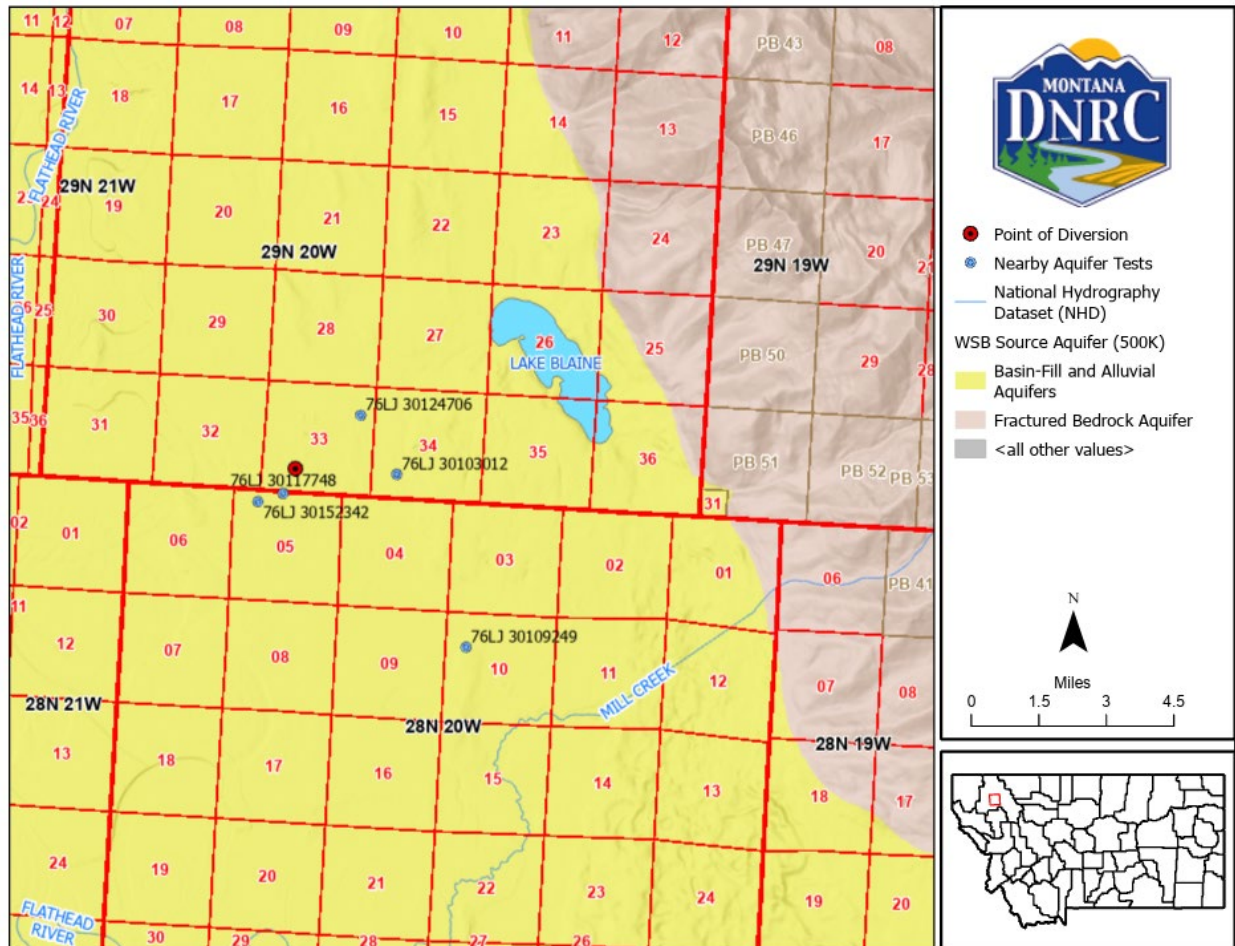

The site is within the southern extension of the Rocky Mountain Trench within the Flathead valley, a half-graben with the eastern margin defined by the Mission Fault. The Flathead Lobe of the Cordilleran Ice Sheet occupied the valley during much of the Pleistocene Epoch. Tectonics, erosion, and glaciation have resulted in the deposition of complex sequences of sedimentary materials within the intermontane valleys forming basin-fill aquifers including Tertiary sediments and multi-layered Quaternary deposits (LaFave et al., 2004).

Intermediate alluvium between the deep and shallow aquifers occurs in areas where alluvium interfingers with till and glaciolacustrine deposits. In these areas, sand and silt occur at intermediate depths between the deep and shallow alluvial aquifers, making the connection between the alluvial units difficult to decipher, especially along the eastern and northern margins of the valley (Smith 2004). The Deep Alluvial Aquifer is overlaid by a confining unit of lacustrine deposits of clays and silts which is widespread throughout the valley ranging in thickness and may be absent in certain areas (LaFave et al., 2004; Rose 2018; Smith 2004).

Groundwater flows west from the margins of the valley toward the center to merge with the overall southern flow toward Flathead Lake in both the shallow and deep aquifers (Rose et al., 2022). Most streams that are fed from the mountain front recharge groundwater prior to reaching valley floor sediments (Bergland et al., 2024). A groundwater model by Warren (1989) and a publication by LaFave et al. (2004) suggest that the Deep Alluvial Aquifer responds as a single connected system and not as a group of separate aquifers. The Deep Alluvial Aquifer provides high yield water and is the most utilized aquifer in the Flathead Valley (LaFave et al., 2004). Primary recharge to the Deep Alluvial Aquifer occurs on the margins of the valley adjacent to the Salish Mountains and Swan Mountain Range (LaFave et al., 2004; Rose et al., 2022). Secondary recharge through

the confining layer to the Deep Alluvial Aquifer occurs through extremely slow hydraulic conductivity (0.0007 ft/day) primarily in the northern portions of the valley (Rose et al., 2022).

**Figure 1:** Map of the Applicant's aquifer test location and other nearby aquifer tests.

### 3.0 Aquifer Test Summary

DNRC requires two different types of tests, "Aquifer Tests" and "Drawdown and Yield Tests." They aid DNRC in analyzing different application criteria as described below.

- An "Aquifer Test" is a pumping test that is meant to provide data to model aquifer properties. The minimum duration of these tests is either 24-hours or 72-hours, depending on the proposed flow rate and volume (ARM 36.12.121(3)(e)), and DNRC only requires one of these tests per application. Aquifer Tests must include observation well data, and pre-test monitoring data as well as post-test recovery data.
- A "Drawdown and Yield Test" is a pumping test that is meant to evaluate well construction and the ability of the aquifer to yield water to the well. This is also known as demonstrating "adequacy of diversion." The minimum duration of these tests is 8 hours, and every well

that is a part of the application must be tested for at least 8 hours. Observation wells, pre-test, and post-test data are not required for Drawdown and Yield Tests.

### Field Methods and Equipment

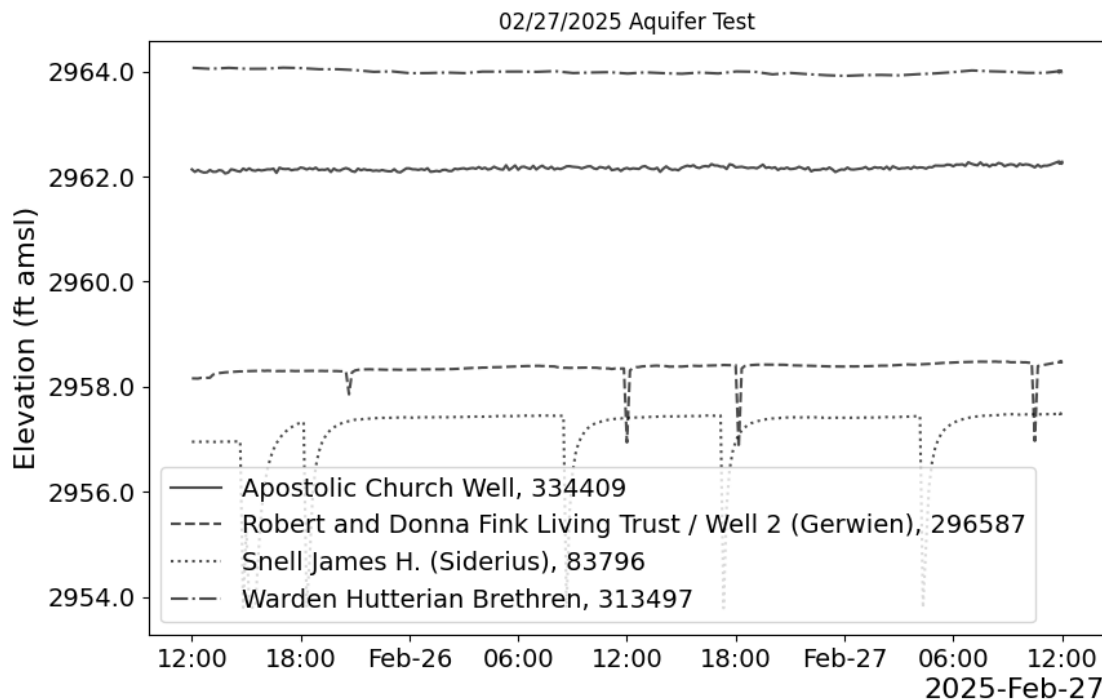

A 24-hour aquifer test was conducted on the Production Well, GWIC ID 335305/334409. Water levels during the aquifer test were collected using In-Situ Leveltroll Model 500 and 700 vented pressure transducer data loggers. Three Observation Wells (GWIC ID [83796](#), [313497](#), [296587](#)) were monitored and are 1,977.7 ft, 3,918.9 ft and 1,300 ft from the Production Well, respectively. Completion details for wells used in the aquifer test are identified in **Table 3**. Discharge was measured using a Flomec TM Series 4-inch diameter combination flow meter and totalizer.

**Table 3:** Specification of wells in 24-hour aquifer test.

| GWIC ID       | Completed Well Depth (ft bgs) | Perforated Interval (ft bgs) | Casing Dimeter (inches) |
|---------------|-------------------------------|------------------------------|-------------------------|
| 335305/334409 | 400                           | 230-360                      | 8 and 6                 |

### Background Data

Background data was collected on the Production and Observation Wells between February 25, 2025, 12:00 P.M. and February 27, 2025, 12:00 P.M. Pump cycles are observed in the background data for Observation Wells GWIC ID 296587 and 83796, but not GWIC ID 313497. These cycles had no impact on the ability of DNRC to assess trends in water levels prior to the test. As identified in **Figure 2** Production and Observation Well background data showed no trends, water elevations appeared stable leading up to the test.

**Figure 2:** Background data for 24-hour aquifer test on GWIC ID 335305/334409.

### Drawdown Data

The 24-hour aquifer test started on February 27, 2025, at 12:00 P.M. on the Production Well and is considered ( $t = 0$ ) for the computation of drawdown. The average pumping rate was 145.1 gpm. Pumping was observed in Observation Well GWIC ID 83796 and 296587 during the test. **Table 4** identifies the maximum drawdown and available water column above the bottom of the well or perforated interval for the Production and Observation Wells at the end of the 24-hour aquifer test. Available water column was quantified by adding 2 ft to the bottom of the perforated interval or bottom of well depth, to reflect the measurement point for static water levels (top of casing). A plot of drawdown and recovery data for each well is provided in **Figure 3**.

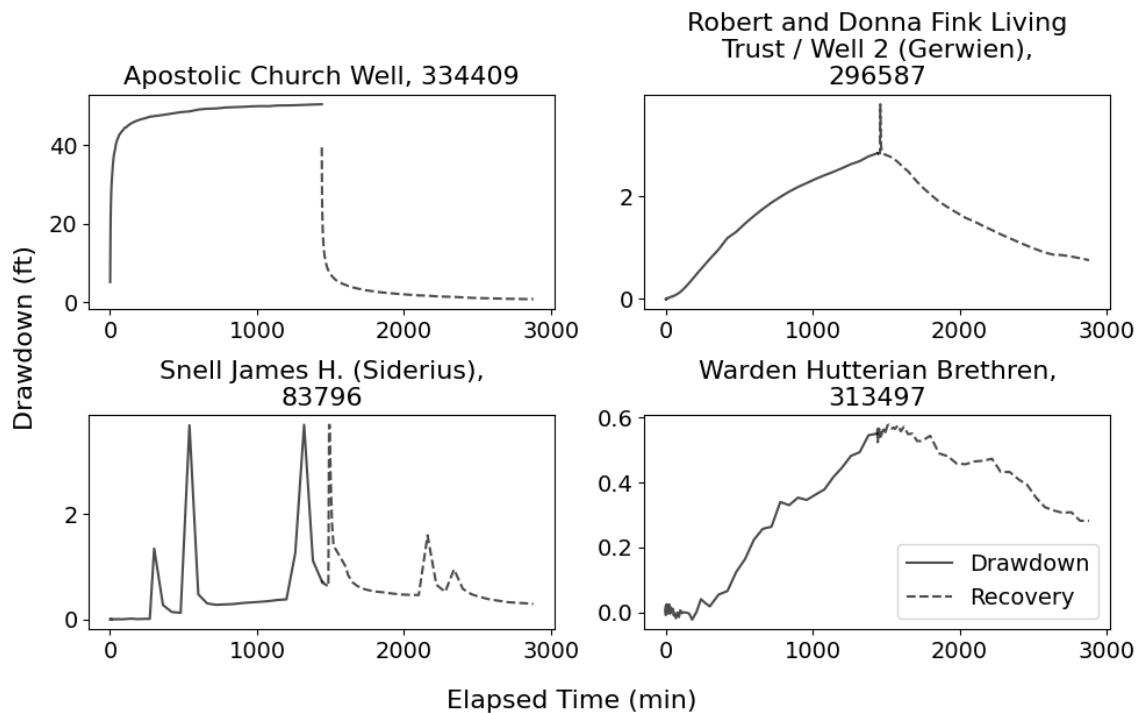

**Table 4:** Available water column at the end of the 24-hour aquifer test for the Production and Observation Wells.

| GWIC ID       | Static Water Level<br>(ft btc) | Maximum Observed<br>Drawdown (ft) | Available Water<br>Column (ft) |
|---------------|--------------------------------|-----------------------------------|--------------------------------|

| 296587        | 30.53                          | 2.85                              | 174                            |

#### 02/27/2025 Aquifer Test

**Figure 3:** Drawdown and recovery data for the 24-hour aquifer test on Production Well GWIC ID 335305/334409.

#### Recovery Data

Recovery groundwater level data were monitored for 1,440 minutes in the Production and Observation Wells starting on March 1, 2025. At the end of the recovery period the Production and Observation Wells (GWIC ID 83796, 313497, 296587) were 0.87, 0.76, 0.30, and 0.28 ft from pre-test static water levels, respectively.

### 4.0 Aquifer Test Analysis

#### Methods

The DNRC utilized AQTESOLV® (HydroSOLVE, Inc., 2007) to analyze drawdown data from the aquifer test and obtain estimates of aquifer properties. Aquifer properties were used in forward modeling to evaluate the available water column in the well, quantity of water available in the source aquifer, and potential impacts to groundwater and surface water rights. AQTESOLV® is an analytical modeling software that uses image well theory and the principle of superposition to simulate aquifer stress tests. Drawdown data and measured flow rates from the aquifer test, and the spatial location of each well are input into the model. Using this compilation of data, aquifer properties including Transmissivity (T) and Storativity (S) are identified based on a best-fit visual and statistical match between the observed and theoretical drawdown data.

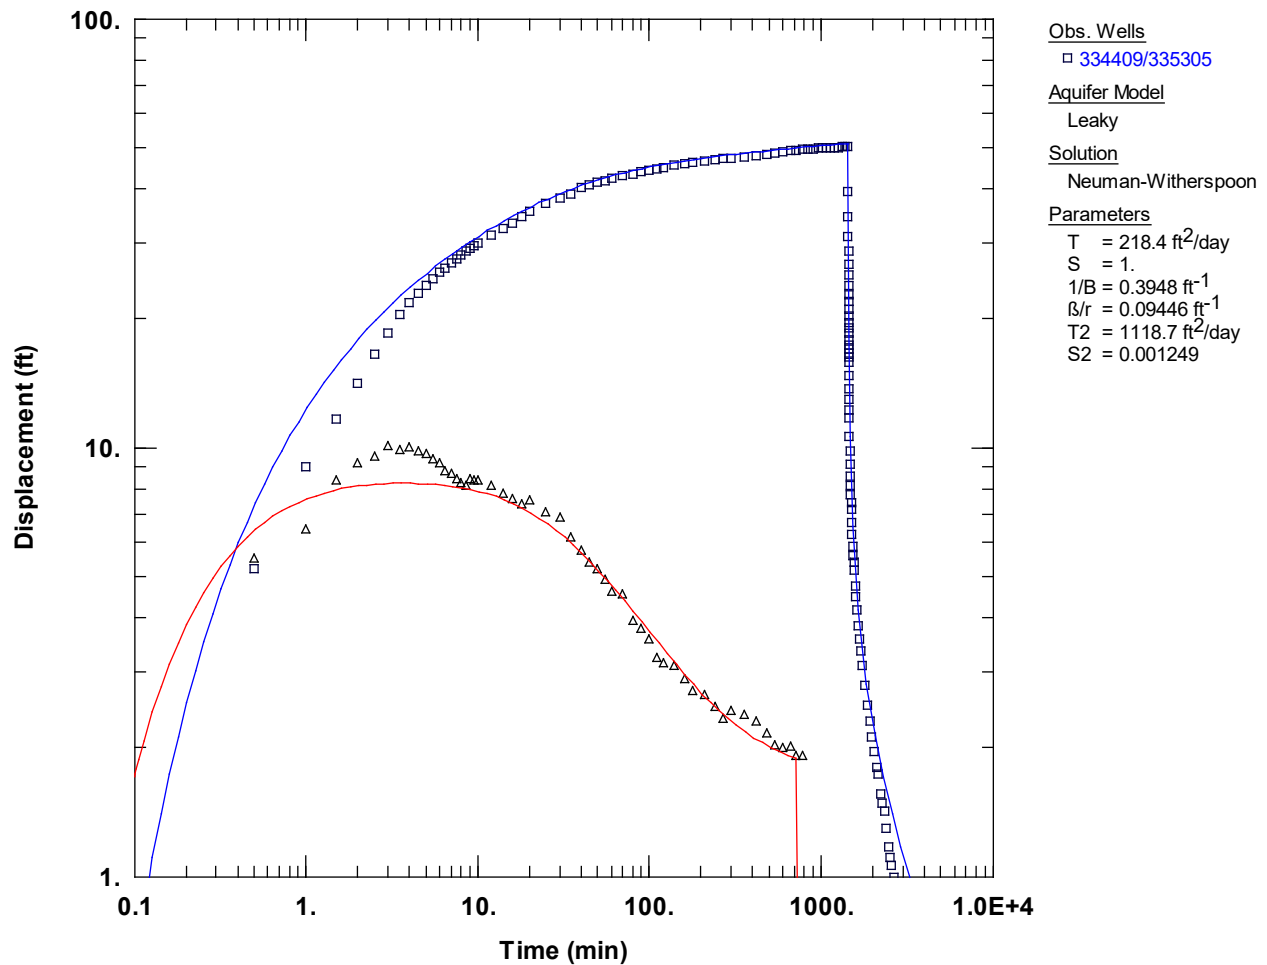

## Analyses

Analytical groundwater solutions were matched to Production and Observation well drawdown data to generate estimates of aquifer properties for the source aquifer. Drawdown data and measured flow rates from the aquifer test, and the spatial location of each well were input into the model. As identified in **Figure 4** through **Figure 6** theoretical AQTESOLV® predicted derivatives (red line) were compared to the calculated derivatives from the observed drawdown (black triangles) and predicted drawdown (blue line) compared to the observed drawdown (black squares).

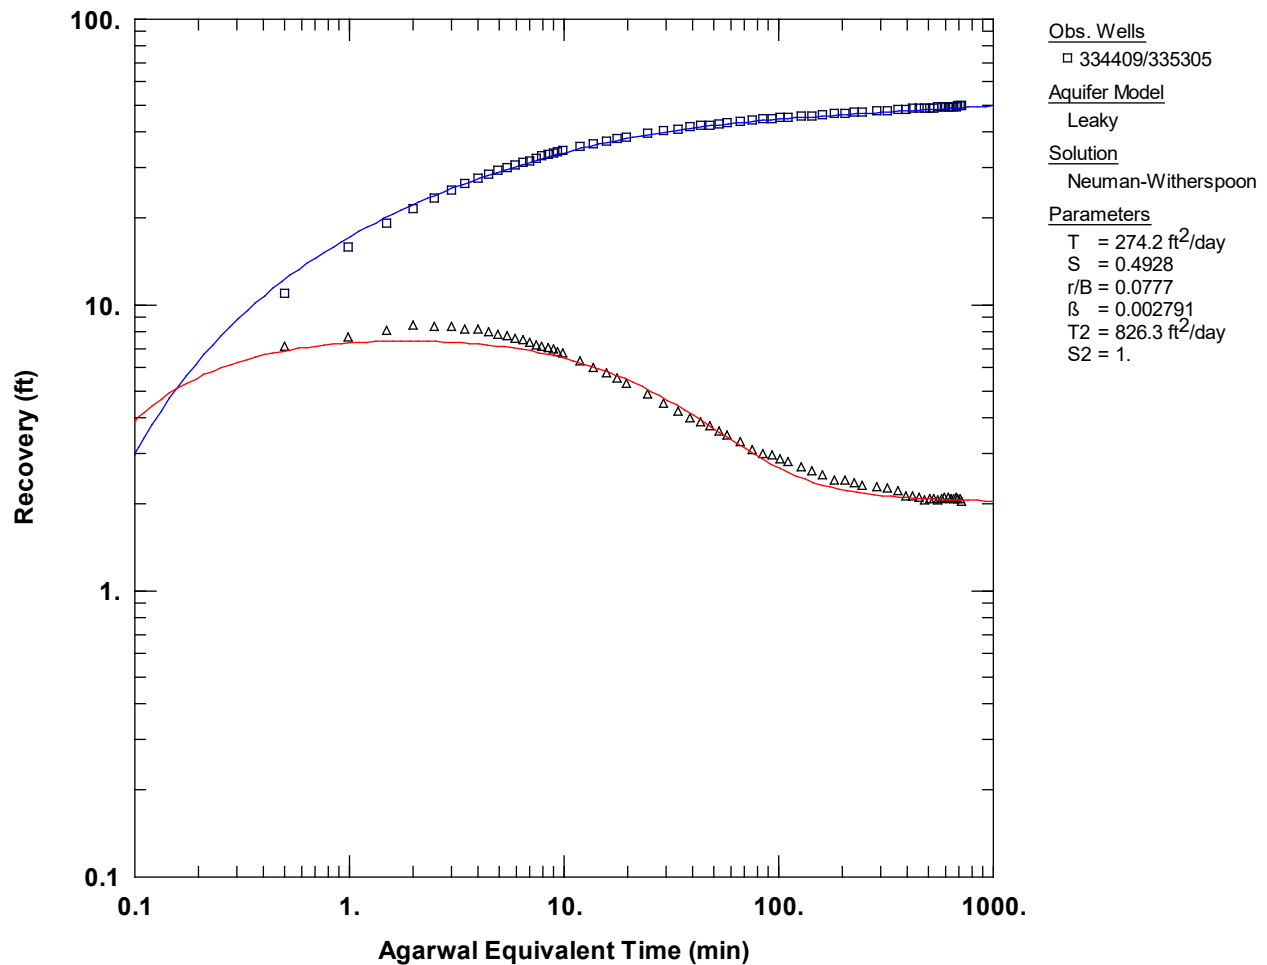

Observation Well GWIC ID 83796 drawdown data was unusable due to frequent pump cycling in the well during the test. The well log for Observation Well GWIC ID 313497, approximately 3,919 ft away from the Production Well, listed a 45-foot layer of clay 200 – 245 ft bgs. This semi-confining to confining unit was not observed in the well log for the Production Well. No drawdown was observed in GWIC ID 313497 within the first 60 minutes of the test. Mid-to-late time data resulted in a poor (visual) and statistical match between observed and theoretical drawdown. As such, data from this well was not used to derive aquifer properties.

For estimation of aquifer properties, the Production Well and Observation Well GWIC ID 296587 were assumed to be fully penetrating to meet the requirements of the Neuman-Witherspoon (1969) solution. Partially penetrating wells using this solution are limited to wells completed in the aquitard above a leaky-confined aquifer (HydroSOLVE, Inc., 2007). The solution assumes the pumped aquifer is leaky, water is released instantaneously from storage, flow is vertical in the aquitard, and wellbore storage is negligible. An average saturated thickness (b) of 223 ft was used and derived from the Productions Wells' bottom of perforated interval to the bottom of the clay and gravel layer in GWIC ID 334409/335305.

As shown on **Figure 4** and **Figure 5**, the Neuman-Witherspoon (1969) solution was applied to Production Well drawdown and recovery data and only to recovery data using the Agarwal method. The Neuman-Witherspoon (1969) solution was also applied to Observation Well GWIC ID 296587 drawdown and recovery data (**Figure 6**). Derived aquifer properties from GWIC ID 296587 were like properties used in Permit No. 76LJ 30117748, which were estimated from a 72-hour aquifer test completed on GWIC ID 296587 (**Table 5**). The Neuman-Witherspoon (1969) solution model resulted in the best-fit visual and statistical match between the observed and theoretical drawdown data. Summary of aquifer test analyses for the Production and Observation well are found in **Table 5**.

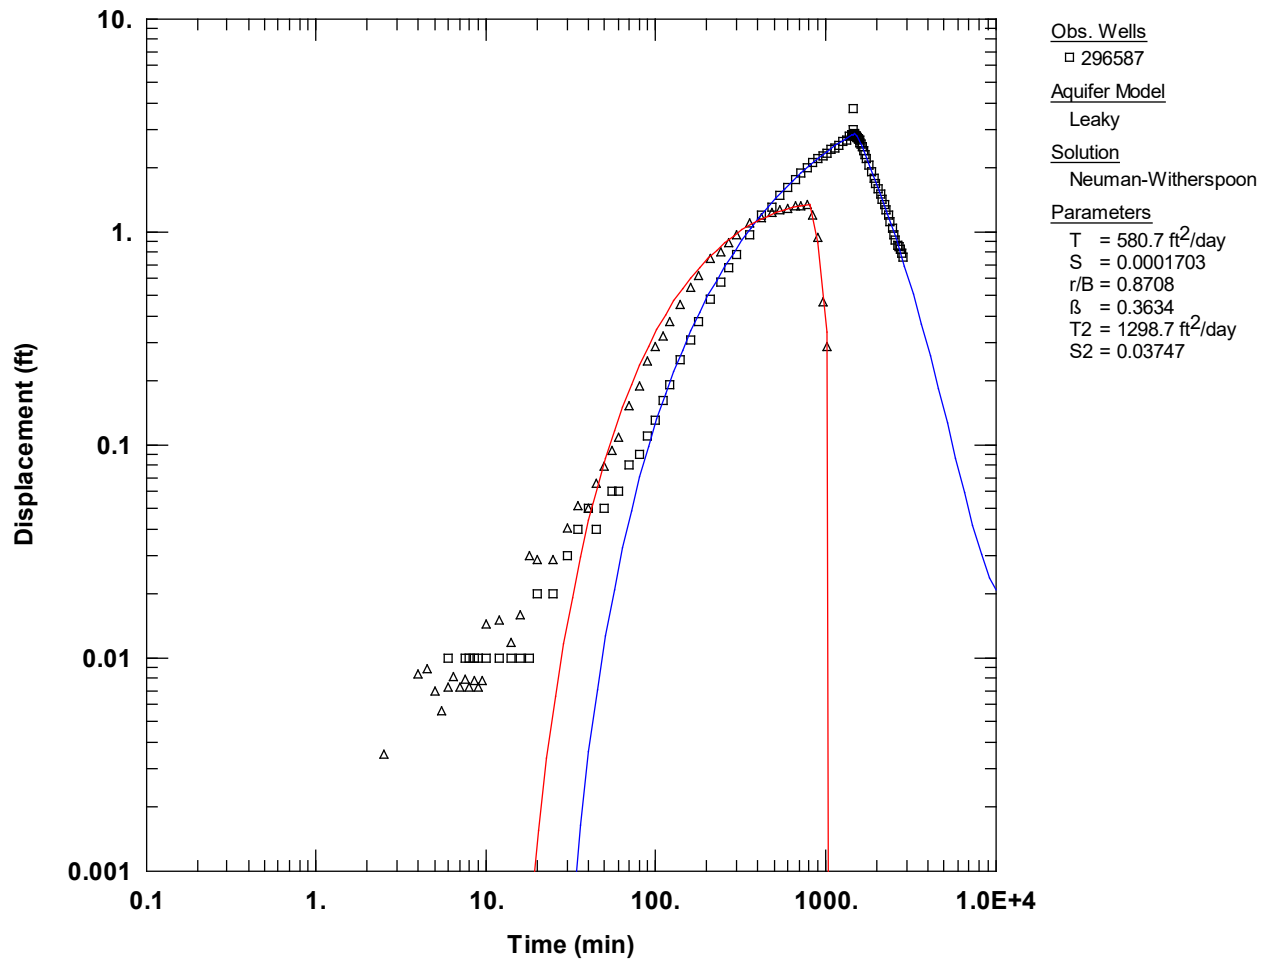

**Figure 4:** Neuman-Witherspoon (1969) drawdown and recovery data and derivative analysis for the Production Well (GWIC ID 334409/335305).

**Figure 5:** Neuman-Witherspoon (1969) Agarwal method applied to recovery data for Production Well (GWIC ID 334409/335305).

**Figure 6:** Neuman-Witherspoon (1969) drawdown and recovery data and derivative analysis for the Observation Well GWIC ID 296587.

**Table 5:** Aquifer test analyses for 24-hour test completed on Production Well GWIC ID 334409/335305. (NA = Not applicable).

| Production Well (GWIC ID, Phase)   | Well Analyzed (GWIC ID) | Analysis Solution                          | T (ft <sup>2</sup> /day) | S or S <sub>y</sub>    |
|------------------------------------|-------------------------|--------------------------------------------|--------------------------|------------------------|
| 334409/335305, Drawdown & Recovery | 334409/335305           | Neuman-Witherspoon (1969)                  | 218                      | NA                     |
| 334409/335305, Recovery            | 334409/335305           | Neuman-Witherspoon (1969) – Agarwal Method | 274                      | NA                     |
| 334409/335305, Drawdown & Recovery | 296587                  | Neuman-Witherspoon (1969)                  | 581                      | 2.0 x 10 <sup>-4</sup> |

Storage coefficients are generally not appropriate to derive from Production Well drawdown and recovery data due to effects from wellbore storage, well losses and well construction. Therefore, the recommended aquifer properties to be used in forward modeling include a T of 581 ft<sup>2</sup>/day and a S value of 2.0 x 10<sup>-4</sup> for the pumped aquifer, a T<sub>2</sub> = 1,299 ft<sup>2</sup>/day and S<sub>2</sub> = 0.04 for the overlying aquifer, and leakage parameters of  $r/B = 2.244 \times 10^{-4}$ ,  $\beta = 9.377 \times 10^{-5}$ , and are from the Neuman-Witherspoon (1969) solution applied to Observation Well GWIC ID 296587 drawdown and recovery data. This solution resulted in the best-fit visual and statistical match.

#### Additional Aquifer Test and Aquifer Property Comparison

As identified in **Table 6** the recommended T of 581 ft<sup>2</sup>/day and S of 2.0 x 10<sup>-4</sup> is within the range of nearby T and S values that were also derived using the Neuman-Witherspoon (1969) solution.

**Table 6:** Nearby Aquifer Tests. Note: T = Transmissivity.

| Water Right No. | GWIC ID | Perforated Interval (ft) | Distance from Applicant Well (ft) | Aquifer Test Length (hours) | Pumping Rate (gpm) | T (ft <sup>2</sup> /day) | Storativity            |

## 5.0 Modeling Inputs

Technical analyses in support of the following criteria assessment: adequacy of diversion and adverse effect were modeled AQTESOLV® (HydroSOLVE, Inc., 2007) using the following inputs:

- Neuman-Witherspoon (1969) solution for fully penetrating well in a leaky-confined aquifer. Aquifer properties below derived from Observation Well GWIC ID 296587 drawdown and recovery data.
- Well radius of 0.33 ft
- Well location (Applicant supplied coordinates)
- Saturated thickness (b) = 223 ft
- $T = 581 \text{ ft}^2/\text{day}$
- $S = 2.0 \times 10^{-4}$
- $T_2 = 1,299 \text{ ft}^2/\text{day}$
- $S_2 = 0.04$
- Leakage parameters of  $r/B = 2.244 \times 10^{-4}$  and  $\beta = 9.377 \times 10^{-5}$

The leakage parameters used to forward model were adjusted from  $r/B$  and  $\beta$  shown in **Figure 6** to account for the distance of the Observation Well GWIC ID 296587 used to derive aquifer properties from the Production Well 334409/335305. Leakage parameters used to forward model one well were adjusted from  $r/B$  and  $\beta$  shown in **Figure 6** to account for the radius of the modeled well (0.33 ft). Monthly pumping schedules used to complete technical analyses are identified in subsequent criteria sections.

## 6.0 Adequacy of Diversion Analysis

An evaluation of the potentially available water column remaining in the proposed well was modeled in AQTESOLV® (HydroSOLVE, Inc., 2007) using the:

- Monthly pumping schedule for the proposed well identified in **Table 7** for the period of diversion.
- 24-hour aquifer test average pumping rate 145.1 gpm.

Predicted theoretical drawdown for the proposed well was modeled for the period of diversion. The Applicant requests 8.75 AF for lawn and garden irrigation, which was apportioned monthly according to the monthly percent of total consumed volume (NIR 80% dry year) for pasture grass using the USDA Natural Resources Conservation Service Irrigation Water Requirements (IWR) program for the Creston weather station (No. MT 2104). The proposed institutional use of 1.62 AF was apportioned monthly based on a year-round period of use.

The modeled maximum drawdown for the aquifer test was modeled using the 24-hour aquifer test average pumping rate, time associated with the test (1,440 minutes) and derived aquifer properties.

**Table 7:** Assumed monthly pumping schedule for GWIC ID 334409/335305.

| Month        | Consumed -<br>NIR IWR<br>80% Dry<br>Year (in/ac) | Monthly % of<br>Total<br>Consumed | Allocation of<br>Lawn/Garden<br>Diverted<br>Volume using<br>IWR Monthly<br>% of Total<br>Consumed<br>(AF) | Diverted<br>Institutional<br>Year-Round<br>Use<br>(AF/month) | Diverted Flow<br>Rate (gpm) |

As identified in **Table 8**, total drawdown is the sum of interference drawdown and predicted drawdown with well loss. Because only one well is proposed, no interference drawdown was modeled. Well loss is calculated by dividing the predicted theoretical maximum drawdown (**Figure 7**) by a well efficiency value. Well efficiency is calculated by dividing the modeled maximum drawdown for the aquifer test by the maximum observed drawdown of the aquifer test.

The aquifer adjacent to GWIC ID 334409/335305 would experience a predicted total drawdown of 5.4 ft at the end of the first year, with a remaining available water column of 330 ft. The remaining available water column for the proposed well is equal to the available drawdown above the bottom of the perforations minus total drawdown including any interference drawdown.

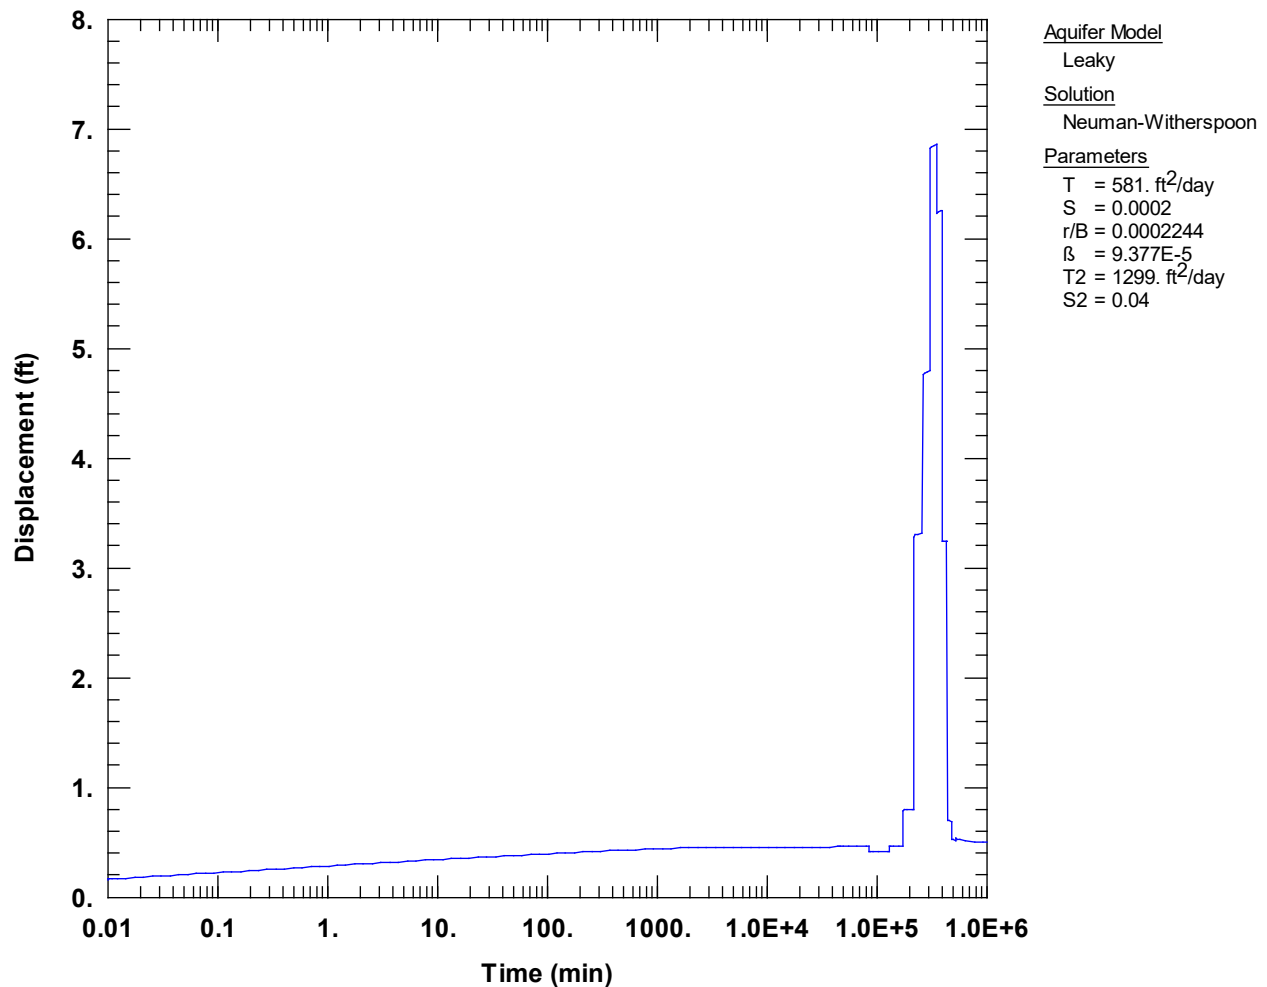

**Table 8:** The remaining available water column for proposed well.

| <b>Drawdown Estimate</b>                                                          | <b>GWIC ID 334409/335305</b> |

<sup>1</sup>The total well depth measuring point (bgs) was adjusted to the top of well casing based on a 2.0 ft well casing stickup reported on the well log. 2.0 ft was added.

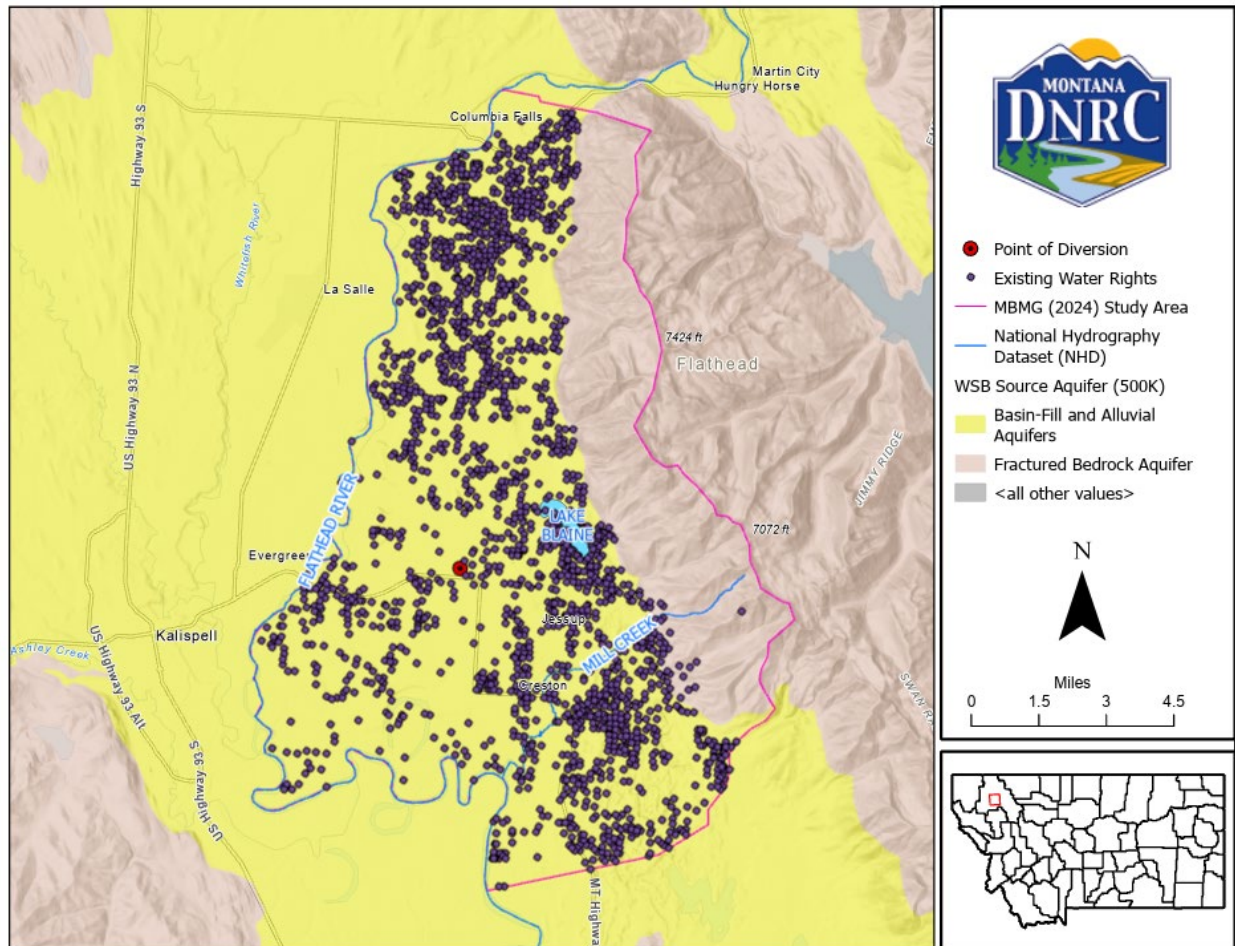

**Figure 7:** Neuman-Witherspoon (1969) time-drawdown plot at the end of the first year of the assumed monthly pumping schedule GWIC ID 334409/335305. Figure is the predicted theoretical drawdown for the well.

## 6.0 Physical Availability Analysis

An evaluation of groundwater availability in the source aquifer for the purpose of evaluating physical and legal availability was based on the Berglund et al., (2024) groundwater budget for the east Flathead Valley basin-fill aquifer system (**Figure 8**). Recharge into the aquifer system totals on average 57,137 AF per year and includes lake infiltration, mountain block, surficial mountain-front, and areal recharge, and groundwater inflow along the southern boundary of the study area. The estimated average annual recharge value of 57,137 AF will be used to quantify the amount of groundwater physically available.

This average annual recharge value will be compared to existing legal demands within the Berglund et al., (2024) study area (**Figure 8**). Berglund et al., (2024) suggest the Deep Aquifer is semi-confined in areas with regional hydraulic connection to the shallower aquifer and bedrock of

the Swan Mountain Range. Therefore, all groundwater rights (active, severed) within the Berglund et al., (2024) study area would be evaluated as a legal demand (**Appendix A**).

**Figure 8:** MBMG (2024) study area boundary for modeled recharge.

## 7.0 Adverse Effect Analysis

Using the Applicant's proposed pump schedule and associated annual volume, potential impacts to existing water rights are evaluated by modeling drawdown in nearby wells and net depletions to surface water(s).

### 7.1 Groundwater - Drawdown in Existing Wells

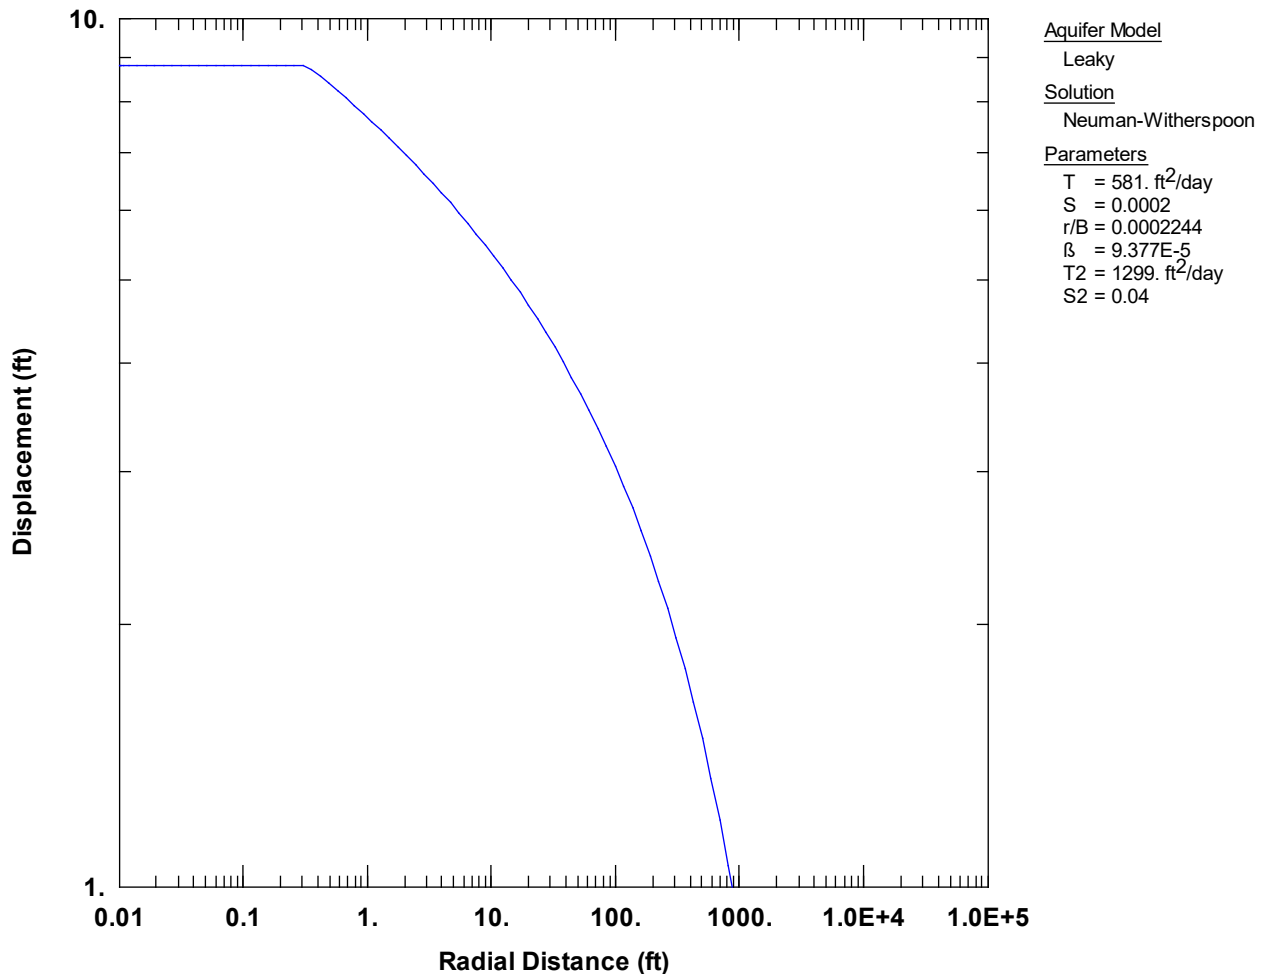

The drawdown in existing wells was modeled in AQTESOLV® (HydroSOLVE, Inc., 2007) using the following pump schedule and boundaries:

- The monthly pumping schedule for GWIC ID 334409/335305 identified in **Table 7** for a period of five years.

The drawdown is the largest at the end of the fifth July of the proposed annual pumping schedule. As identified in **Figure 9**, the 1-foot drawdown contour extends out approximately 900 ft from

GWIC ID 334409/335305 at the end of the fifth July. As such, zero water rights are predicted to experience drawdown equal to or greater than one foot.

**Figure 9:** Distance drawdown plot for the 1-foot drawdown contour.

## 7.2 Surface Water - Net Depletion

Pursuant to *Montana Trout Unlimited v. DNRC*, 2006 MT 72, 331 Mont. 483, 133 P.3d 224, the DNRC recognizes the connection between surface water and groundwater, and the effect of pre-stream capture and induced infiltration on surface waters.

Net depletions to surface water depend on propagation of drawdown to areas of the aquifer from which water can be captured. Captured water consists of two possible sources – a reduction in the natural discharge (outflow) rate of groundwater from the aquifer (pre-stream capture) or an increase in the natural/artificial recharge (inflow) rate to the aquifer (e.g. induced infiltration). Two important assumptions are made when evaluating net depletions, first the stream and underlying aquifer remain hydraulically connected by a continuous saturated zone, and second, the stream does not become dry. In addition, net depletion is not a function of groundwater flow rate or direction (Theis, 1938; Leake, 2011) and drawdown from pumping can propagate through the

entire thickness of the confining layer to overlying aquifers or surface waters (Konikow and Neuzil, 2007).

As such, net depletions are identified for hydraulically connected surface water sources, not including ditches or ephemeral streams. Net depletion is equal to consumption for proposed groundwater use and is described as the calculated volume, rate, timing, and location of reductions to surface water that are offset by return flows (non-consumed water). Net depletion is evaluated by 1.) quantifying the consumed volume associated with the proposed use; 2.) identifying hydraulically connected surface waters; and 3.) calculating the monthly rate and timing of net depletions to affected surface water(s).

### **1. Consumed Volume**

Consumed groundwater does not return to the source aquifer. Consumed volume depends on the proposed use and its associated percentage of known consumption. Depletion is assumed to be equivalent to consumption on an annual basis unless return flows do not accrete to the potentially affected surface water.

Monthly consumption for irrigation, not including turf grass, can be calculated using ARM 36.12.115 irrigation standards and associated efficiency values or the net irrigation requirement (dry year 80% chance) calculated using the USDA Natural Resources Conservation Service (NRCS) IWR program with inputs consistent with DNRC consumptive use rules in ARM 36.12.1902. Monthly consumption for irrigation of turf grass (lawns) is calculated using either a minimum efficiency value of 70% and ARM 36.12.115 lawn and garden standards or the net irrigation requirement from IWR with inputs consistent with DNRC (2010) Consumptive Use Methodology for turf grass.

Consumption for other purposes are listed in **Table 9** and are based on the results of studies by Kimsey and Flood (1987), Vanslyke and Simpson (1974), Paul, Poeter, and Laws (2007), DNRC (2018), wastewater treatment method, operation of systems, or DNRC policy. Net evaporation is calculated using gridded monthly net evaporation values and methodologies associated with DNRC (2023).

**Table 9:** Percent consumption by beneficial use.

| Purpose                                                               | Method of treatment/Use                                                                           | Consumed |
|-----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|----------|
| Domestic/Municipal*/Commercial/Institutional                          | Individual drainfield                                                                             | 10%      |
| Domestic/Municipal*/Commercial/Institutional                          | Central treatment facility with minimal consumption                                               | 5%       |
| Domestic/Municipal*/Commercial/Institutional                          | Evaporation basin or land application                                                             | 100%     |
| Municipal Use for Municipality                                        | Variable                                                                                          | 100%     |
| Water Marketing/Agriculture Spraying/Stock Water/some Industrial Uses | Variable                                                                                          | 100%     |
| Commercial/Industrial                                                 | Aggregate Washing – construction standard for moisture allowed in the finished aggregate product. | 5%       |
| Commercial                                                            | Snow Making – depends on time of day, machine, weather at time of operation, etc.                 | 10-30%   |
| Fisheries, Recreation, Storage for Irrigation                         | Net evaporation off reservoir surface, gridded monthly net evaporation values and methodologies   | AF/acre  |

*\*Municipal use for a non-municipality, such as a Water District.*

### WSB Findings

For the subject application, proposed uses include institutional and lawn and garden irrigation. The Applicant used the DNRC standard of 2.5 AF/acre and associated efficiency of 70% for lawn and garden irrigation; 6.13 AF is the consumed volume for 3.5 acres of lawn and garden. Wastewater disposal methods include a drainfield; as such, institutional use is 10% efficient. The requested diverted institutional volume is 1.62 AF, resulting in 0.16 AF being consumed. The total consumed volume is 6.3 AF.

## **2. Hydraulically Connected Surface Water(s)**

Potentially affected surface waters in a net depletion evaluation are identified by their hydraulic connection, both direct and indirect, to the source aquifer of a proposed groundwater diversion. Hydraulic connection depends on the depth to groundwater beneath the beds of surface waters, connection between deep and overlying shallow aquifers, vertical gradients, and can vary along a stream reach and with time of year.

Procedures for evaluating hydraulic connection and identifying one or more potentially affected surface water(s) for a proposed well in an unconfined/confined aquifer or regional bedrock aquifer can be found in DNRC (2018) and DNRC (2019), respectively.

Following protocols in DNRC (2018) **Table 10** identifies published information used to assess hydraulically connected surface water(s). Not all data may be available for each project and is noted as “NA” when that occurs.

**Table 10:** Published information used to identify hydraulically connected surface water(s).

<sup>2</sup> USGS PROSPER probability of streamflow permanence (greater than 50 percent of the time it flows).

<sup>3</sup> Per DNRC (2018) hydraulic connection of individual stream reaches to ground water is evaluated by comparing streambed elevations to static ground water elevations measured in MBMG GWIC wells less than 50 ft deep and within 1,000 ft of surface water or from published water table maps. Surface water within that area is considered hydraulically connected to the unconfined aquifer if static ground water elevations are above or within 10 ft of the elevation of the stream bed (**Figure 13**).

<sup>4</sup> Potentiometric surface maps from Berglund et al, 2024 indicate hydraulic connection between the deep and shallow aquifer. Beginning on Pg. 95 of the report, the vicinity where the proposed PODs are located shows equivalent potentiometric surfaces in the shallow (Layer 1) and Deep Alluvial Aquifer (Layer 4).

<sup>5</sup> Review Gridded National Soil Survey Geographic Database to identify hydric soils or shallow water tables near surface water sources (**Figure 13**).

### WSB Scientific Findings

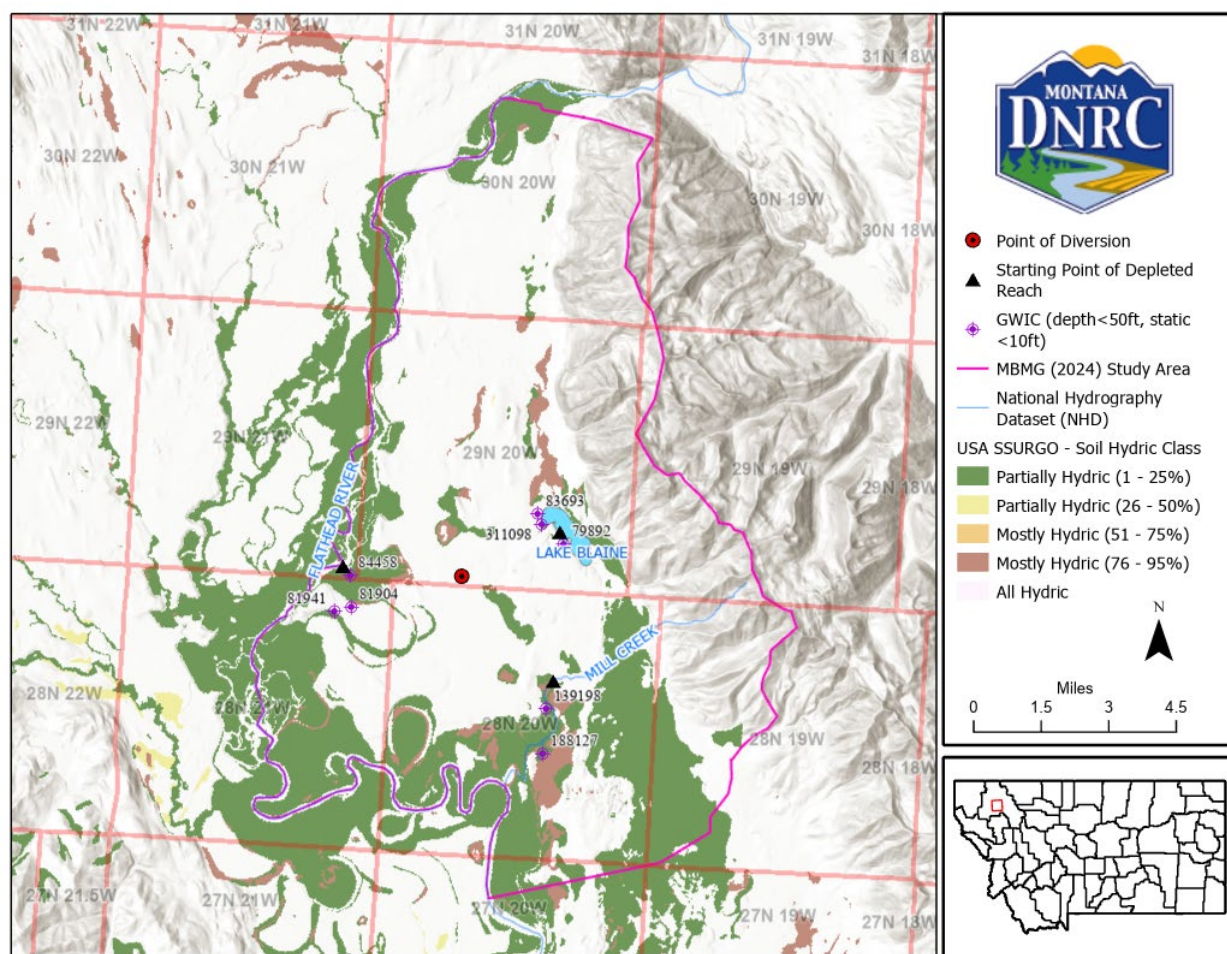

Based on the review of the published information in **Table 10**, the source aquifer is hydraulically connected to the Flathead River, Mill Creek and Lake Blaine. The starting points of the depleted reach are identified in **Figure 13** and are listed below.

- Lake Blaine: SW of Section 26, Township 29 North, Range 20 West, Flathead County
- Flathead River: NWSE of Section 35, Township 29 North, Range 21 West, Flathead County
- Mill Creek: SESE of Section 10, Township 28 North, Range 20 West, Flathead County

Net depletion is apportioned between multiple potentially affected surface waters generally following procedures described in Section 3.2 of a guidance document developed by the Province of British Columbia (2016) for determining the effect of groundwater diversion on specific surface water sources. Distance to each source and calculated proportions are shown in **Table 11**.

**Table 11:** Proportion of net depletions to each hydraulically connected surface body.

| Source         | Distance (ft) | Proportion | Net Depletion Volume (AF) |
|----------------|---------------|------------|---------------------------|
| Flathead River | 14,000        | 0.37       | 2.33                      |
| Lake Blaine    | 14,400        | 0.35       | 2.20                      |
| Mill Creek     | 16,200        | 0.28       | 1.76                      |

**Figure 13:** Location of wells used to assess hydraulic connection and starting points of depleted reaches.

### 3. Rate and Timing of Depletions

Evaluations of the rate and timing of depletions caused by pumping are based on the basic concept that groundwater pumping eventually is offset by an equivalent increase in recharge or decrease in discharge (Theis, 1940; Leake et al., 2008), a process defined as capture by Lohman (1972).

Capture occurs as drawdown propagates to surface water and areas of phreatophyte vegetation (areas of groundwater discharge) that takes water directly from groundwater. In the absence of credible evidence to the contrary, capture of ET by phreatophytes is neglected and net depletion is assumed to equal total capture. This assumption is justified because published estimates for conditions common in Montana alluvial valleys indicate capture of ET generally is less than 10 percent of total capture (Xunhong, 2006). Capture of ET in ephemeral drainages may be significant and will be evaluated on an application-by-application basis.

The rate and timing of net depletion caused by pumping may be modeled using a variety of analytical and numerical models selected to fit site-specific conditions and needs. Simple models including the Alluvial Water Accounting System (AWAS), the Well Pumping Depletion Model (WPDM) or FWD:SOLV (HydroSOLVE, 2024) typically are used by DNRC to model depletions to one source with simple aquifer boundaries. Adjustments may be made for more complex conditions or multiple sources using methods like those described by Contor (2011), analytical models by Hunt (2003) and Butler et al. (2001) or a superposition numerical groundwater flow model.

Modeling may not be necessary in some situations such as where a proposed use is constant year-round, the source aquifer is confined, or the distance to potentially affected stream reaches is greater than one mile. Modeling net depletions can be simplified if the proposed place of use is located the same relative distance from the potentially affected surface water as the proposed wells and all non-consumed water infiltrates the source aquifer and returns to the potentially affected surface water as return flows. Under those simplifying assumptions, net depletion can be modeled based on withdrawal of the monthly consumed amounts. Otherwise, net depletion by the full withdrawals and return flows need to be modeled separately with net depletion calculated as depletion minus return flows.

Net depletion by pumping in the source aquifer primarily occurs through propagation of drawdown through the leaky-confined aquifer and overlying unconfined aquifer to the potentially affected reach of the Flathead River, Lake Blaine and Mill Creek. Due to the distance to each source from the well and semi-confined nature of the source aquifer, depletions were not modeled and are assumed to occur at a constant-rate year-round. Monthly net depletions to the hydraulically connected sources are identified in **Table 2**.

## Review

This document has been reviewed on July 11, 2025 in accordance with Category 7 of [DNRC's Water Sciences Bureau Minimum Standards of Review](#), Version 2, February 2024.

### Overview

This report is Part B of a two-part publication which analyzes data submitted by the Applicant in support of the above-mentioned water right application. This report provides technical analyses as required under the Administrative Rules of Montana (ARM) 36.12.1303 in support of the water rights criteria assessment as required in §85-2-311, Montana Code Annotated (MCA).

This Groundwater Permit Technical Analyses Report – Part B contains the following sections:

## Variances

A variance from the requirements found in ARM 36.12.121(3)(a) was granted by the Kalispell Regional Office on May 29, 2025. ARM 36.12.121(3)(a) requires pumping must be maintained within 5% of the average test rate throughout the duration of the test. The variance was granted because although the pumping rate for the first few minutes at the start of the 24-hour test were outside of the 5% range, the pumping rate was stable throughout the rest of the test. Despite the deviation early in the test, the Water Sciences Bureau determined the data were adequate to analyze aquifer properties.

## 1.0 Application Details

The Applicant proposes to divert groundwater year-round using a well at a maximum rate of 94 gallons per minute (GPM). Up to 1.62 acre-feet of water would be used for institutional use. Additionally, between April 20 and October 10, lawn and garden irrigation would occur on 3.5 acres. A total volume of 8.75 AF will be used for the lawn and garden irrigation. All uses will occur within SESW Section 33 T29N R20W.

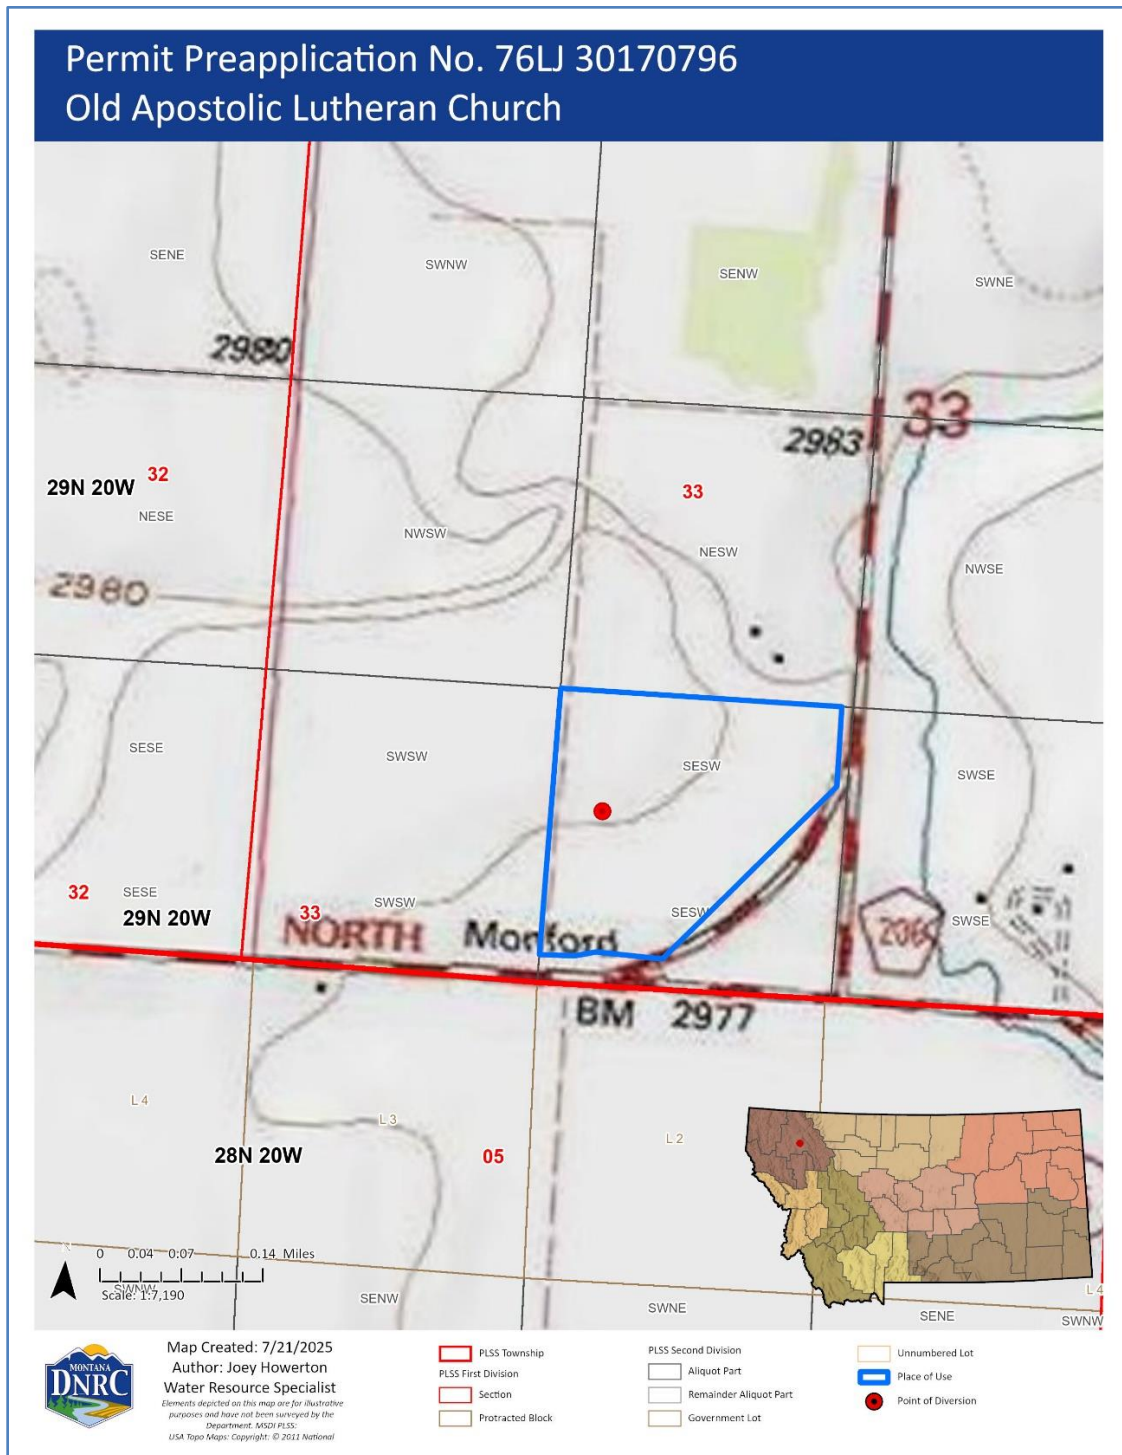

Figure 1: Map of the proposed place of use and points of diversion.

## 2.0 Surface Water Analysis of Depleted Surface Water

Three surface water sources were determined to be hydraulically connected and therefore will be depleted by the proposed appropriation. Flathead River is expected to account for 37% of total surface depletion, Lake Blaine will account for 35% of the total surface depletion, and Mill Creek will account for 28% of the total surface depletion. A discussion of each source is below.

### 2.1 Source Description

See the Groundwater Analysis in Part A of this Technical Analyses Report for a complete description of the methodology used to identify the depleted surface water source.

**Depleted Source of Water:** Flathead River

**Depleted Source Type:** Perennial Stream

**Location of Depletions:** Starting at NWSE Section 35 T29N R21W.

### 2.2 Method of Estimation

**Gage Name:** Flathead River at Columbia Falls MT

**Gage Number:** 12363000

**Period of Record:** October 1951 – March 2025

**Why this gage is considered an appropriate data source:** Depletions to the Flathead River would manifest approximately 2000 feet west of the proposed point of diversion (well).

The closest gage is USGS Gaging Station No. 12363000 which is approximately 11.5 river miles upstream of the location of depletion. This gage has a long-established period of record and there are no control structures between the location of depletion and the gage, making it the appropriate data source for this analysis.

### 2.3 Monthly Flow Rate and Volume

**Methodology used to quantify monthly physical availability of Flathead River water in the depleted reach during the period of surface water depletion (year-round):**

To simplify the analysis of this depleted reach, the Department will analyze the physical and legal availability of the entire reach of the Flathead River from USGS Gaging Station No. 12363000 Flathead River at Columbia Falls, MT downstream to the Flathead Lake Inlet. The Department finds this appropriate because this is a well characterized reach of the Flathead River.

The Department calculated median of the mean monthly flow rates in CFS for the Flathead River using USGS Gaging Station No. 12363000 records for each month of the proposed year-round period of depletion (Table 1, column B).

Since the gage used marks the upstream extent of the reach of the Flathead River that contains the depleted reach, the median of the mean monthly values calculated using data from USGS Gaging Station No. 12363000 represent the amount of water physically available in the depleted reach (Table 1, column B). Physically available monthly flows were then converted to monthly volumes (Table 1, column E) using the following equation found in the DNRC Water Calculation Guide: median of the mean monthly flow (CFS)  $\times$  1.98 (AF/day/1 CFS)  $\times$  no. days per month = AF/month.

**Table 1: Physical Availability of the Flathead River from USGS Gaging Station No. 12363000 downstream to Flathead Lake (the Depleted Reach)**

## 2.1 Source Description

See the Groundwater Analysis in Part A of this Technical Analyses Report for a complete description of the methodology used to identify the depleted surface water source.

**Depleted Source of Water:** Lake Blaine

**Depleted Source Type:** Lake

**Location of Depletions:** SW of Section 26 T29N R20W

## 2.2 Method of Estimation

**Lake Volume:** Bathymetric data

The volume of the lake was quantified using a bathymetric map created by the MT Dept of Fish, Wildlife, and Parks in 1961.

## 2.3 Monthly Flow Rate and Volume

**Methodology used to quantify physical availability of Lake Blaine.**

Lake Blaine has surface inlets but receives most of its water from subsurface springs which are fed by recharge from creeks that originate in the mountains and percolate into porous glacial deposits. The Department reviewed available aerial photographs of Lake Blaine taken between 1978-2015. The May 2004 Google Earth Pro US Geologic Survey Image (Figure 1) was selected because it was the lowest lake level documented by a photo. The low pool volume of Lake Blaine is a result of consecutive below average precipitation years; this volume provides a conservative estimate of physical availability.

Based on MTFWP data the total surface area of Lake Blaine at full pool is approximately 382 acres. The max depth is 141 feet and the average depth is 51 feet. The total volume at full pool is 19,482 AF (382 acres x 51 foot average depth).

The Department utilized MTFWP's calculation for total lake volume, but changed the surface area to 236 acres and reduced the average depth by 20 feet to reflect low pool conditions. The total volume of water physically available in Lake Blaine at low-pool is 7,316 feet (236 surface acres x 31 foot average depth)(Table 1). The Department finds 7,316 AF to be a reasonable estimate of Lake Blaine's physical availability.

| Table 2: Physical Availability (Volume Capacity) of Lake Blaine |          |
|-----------------------------------------------------------------|----------|
| Surface Area (acres)                                            | 236.00   |
| Maximum Depth (feet)                                            | 141.00   |
| Average Depth (feet)                                            | 31.00    |
| Volume (AF)                                                     | 7,316.00 |

## 2.1 Source Description

See the Groundwater Analysis in Part A of this Technical Analyses Report for a complete description of the methodology used to identify the depleted surface water source.

**Depleted Source of Water:** Mill Creek

**Depleted Source Type:** Perennial Stream

**Location of Depletions:** Starting at SESE Section 10 T28N R20W (upstream manifestation of depletions)

## 2.2 Method of Estimation

**Gage Name:** Mill Creek below Creston Hatchery

**Gage Number:** DNRC Gaging Station No. 76LJ 07500

**Period of Record:** August 2016 – September 2024

**Why this gage is considered an appropriate data source:** DNRC Gaging Station No. 76LJ 07500 is within the depleted reach and is located approximately 1,075-feet downstream of the eastern boundary of the SESE of Section 10. The date range used includes the entire period of record for this gage.

## 2.3 Monthly Flow Rate and Volume

**Methodology used to quantify monthly physical availability of Flathead River water in the depleted reach during the period of surface water depletion (year-round):**

The Department calculated mean monthly flow rates in CFS for Mill Creek using DNRC Gaging Station No. 76LJ 07500 records for each month of the proposed period of depletion (Table 3, column B). Those flow rates were then converted to monthly volumes in AF (Table 3, column C).

The Department calculated the monthly flows appropriated by existing users between the upstream manifestation of depletions and DNRC Gaging Station No. 76LJ 07500 on Mill Creek (Table 3, column D) by:

- i. Generating a list of existing water rights from the upstream manifestation of depletions downstream to DNRC Gaging Station No. 76LJ 07500 (Appendix C);
- ii. Designating their uses as occurring during their recorded periods of diversion;
- iii. Assigning a single combined flow rate of 0.08 CFS to all livestock direct from source rights without a designated flow rate per Department adjudication standards (quantification of said water rights is not a re-adjudication or historical use analysis); and,
- iv. Assuming that the flow rate of each existing right is continuously diverted throughout each month of its period of diversion. This assumption is necessary due to the difficulty of differentiating the distribution of appropriated volume over the period of diversion. This leads to an overestimation of legal demands on the physical volume of water. The Department finds this an appropriate measure of assessing existing rights as it protects existing water users.

The Department added the flow rates of the existing legal demands (Table 3, column D) within the area of potential impact from the physically available water (Table 3, column B) to determine legally available flow and volume in the depleted reach (Table 3, columns E-F).

| <b>Table 3: Physical Availability of Mill Creek at the upstream extent of the depleted reach (eastern boundary of SESE of Sec 10, T28N, R20W)</b> |                                                        |                                                         |                                                                                                         |                                                                               |                                                                                |

| December                                                                                                                                          | 25.08                                                  | 1,539.22                                                | 44.36                                                                                                   | 69.44                                                                         | 4,262.04                                                                       |

### 3.0 Area of Potential Impact Analysis of Depleted Surface Water

#### FLATHEAD RIVER

**The Area of Potential Impact (AOPI) for the Flathead River is:** The AOPI to the Flathead River extends from the NWSE Section 35 T29N R21W, downstream to the inlet of Flathead Lake in Section 34, T27N, Range 20W, Flathead County, Montana. There are 198 water rights on the Flathead River (including hydraulically connected sloughs) within the AOPI. A list of these water rights is presented in Appendix A.

**Why this is an appropriate Area of Potential Impact:** Depletion of the Flathead River will reduce the flow of water in the River downstream of this location. The AOPI is terminated at the inlet of Flathead Lake because the nature of the source changes dramatically to a very large lake/reservoir with additional inflows present along its shoreline and the SKQ dam controlling outflows of the lake.

#### LAKE BLAINE

**The Area of Potential Impact (AOPI) for Lake Blaine is:** The AOPI for this source is the entirety of Lake Blaine which is wholly located within Sections 25, 26, 27, 35, and 36 all within T29N R20W, Flathead County, Montana. There are 24 water rights on Lake Blaine within the AOPI. A list of these water rights is presented in Appendix A.

**Why this is an appropriate Area of Potential Impact:** The level of Lake Blaine frequently falls below the outlet into Blaine Creek. Since there is no guaranteed connection between Blaine Creek and Lake Blaine, only the lake will be assessed for availability.

#### MILL CREEK

**The Area of Potential Impact (AOPI) for this application is:** The AOPI is from Mill Creek downstream of the point of diversion to the confluence of the Flathead River. This is from the SESE of Section 10, T28N, R20W, Flathead County, Montana through the E2 of Section 15, Section 22, NW NW of Section 27, and NE of Section 28, Flathead County, Montana. There are 23 water rights on Mill Creek within the AOPI. A list of these water rights is presented in Appendix A.

**Why this is an appropriate Area of Potential Impact:** This is an appropriate AOPI because the Flathead River was assessed separately for availability and is a much larger source for assessment.

### Review

This document has been reviewed by the Department on July 21, 2025.

RE: Granted Variance for Application No. 76LJ 30170796 – Old Apostolic Lutheran Church

Dear Ms. Graham,

The Applicant (through its consultant) requested a variance from the aquifer testing requirements for the subject line permit application.

A variance from the following rule is needed for the aquifer test conducted on the well.

- ARM 36.12.121(3)(a) requires that the pumping rate not vary by more than 5% from average.

The Department grants a variance of aquifer testing from the ARM noted directly above.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jim Ferch".

**Subject: Complete Preapplication Form for Beneficial Water Use Permit Application No. 76LJ 30170796**

Dear Applicant,

The Kalispell Regional Office of the Department of Natural Resources and Conservation (DNRC or Department) received your Preapplication Meeting Form and preapplication meeting fee on 5/30/2025, and the Department deems the submitted Preapplication Meeting Form to be successfully completed per ARM 36.12.1302.

As designated on the submitted Preapplication Meeting Form per §85-2-302(3)(b), MCA, the Department will produce the technical analyses based on the parameters included in the Preapplication Meeting Form (ARM 36.12.1302(4)) within 45 days of 06/06/2025.

Please let me know if you have any questions.

Best,

**Subject: Form 600P-B Preapplication Meeting Form Submittal for Old Apostolic Lutheran Church of Lakeside, Montana (Application 76LJ 30170796)**

Dear Jim,

Water and Environmental Technologies (WET) is pleased to submit the enclosed Form 600P and supporting documents on behalf of SPP, LLC in support of the proposed groundwater appropriation discussed in the preapplication meeting on April 22, 2025.

As discussed during the preapplication meeting, the purpose of this application is to provide the flow rate and volume required for institutional use and lawn and garden. The proposed use will divert water from the Deep Alluvial Aquifer via a 400 foot deep well. A total volume of 10.37 acre-feet and a flow rate of 94 gallons per minute (GPM) is required for the proposed use which will provide irrigation to a total of 3.5 acres.

The following attachments are provided so that DNRC may initiate the technical review process:

- Form 600P-B – Preapplication Meeting Form: Part B
- Form 600P-A – Preapplication Meeting Form: Part A
- Figures – Site Vicinity Map, Site Utility Plan, Building Utility Plan, General Notes & Details, Irrigated Area Exhibit
- Attachment A – Water Usage and Flow Rate Calculations
- Attachment B – Aquifer Testing Addendum and Variance Request
- Attachment C – Additional Hydraulically Connected Source Sheets

If you have any questions regarding this submittal or any of the supporting documents, please reach out to via email at [jgraham@waterenvtech.com](mailto:jgraham@waterenvtech.com) or phone at (406) 309-6085.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jamie Graham', is written above the typed name.

*The Applicant is responsible for providing a "Follow-up Responses" document for all follow-up identified in Preapplication Meeting Form Part A (Form 600P-A). The Applicant may not alter Form 600P-A. If a response has changed to a question answered at the preapplication meeting, the Applicant can provide a new response in a separate document entitled "Amended Responses" with the question number labeled.*

*The following guidelines are applicable to both the "Follow-up Responses" and "Amended Responses" documents. Clearly label all question numbers. Answer questions in the same format as Form 600P-A. For responses in the form of checkboxes, write "Y", "N", or "S". Constrain narrative responses to the specific question as is asked on the form; do not respond to multiple questions in one narrative. Label units in narrative responses and tables. Tables must have the exact headings found on the form. Questions that require items to be submitted to the Department may be marked "S" when the required item is included with the document.*

1. ☐ Y ☒ N Are you submitting this form in response to a determination by the Department that a previously submitted Form 600P-B was inadequately completed?

If yes,

- a. Date form was returned ("Form Returned" date found in "For Department Use Only" box on the previously submitted Form 600P-B): \_\_\_\_\_
- b. If a "Follow-up Responses" or "Amended Responses" document is required by questions 2 or 3, submit complete updated documents with responses that stand-alone. The Department will only use the most recently submitted "Follow-up Responses" and "Amended Responses" documents for departmental technical analyses or scientific credibility review; the Department will not use multiple versions of a document.

2. ☐ Y ☒ N Were any questions identified as requiring follow-up on Form 600P-A?

If yes,

- a. ☐ S Submit "Follow-up Responses" document for all questions requiring follow-up.

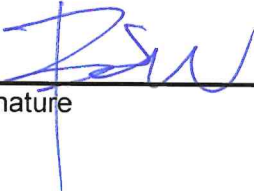

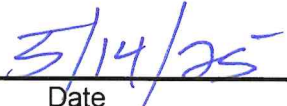

## FOLLOW-UP AND AMENDED RESPONSES AFFIDAVIT & CERTIFICATION

"I attest that this preapplication meeting form (Form 600P-A and Form 600P-B), follow-up, and amended responses accurately portray the proposed project. I am aware that my application for this project will not qualify for a discounted filing fee and expedited timelines if, upon submittal of the application to the department, I change any element of the proposed application from the preapplication meeting form, amended responses, or follow-up materials (ARM 36.12.1302(6)(a))."

## APPLICATION DETAILS

The following questions are mandatory and must be filled out before the Preapplication Meeting Form is determined to be complete. Narrative responses that are larger than the space provided can be answered in an attachment. If an attachment is used, mark the see attachment ("A") checkbox on this form and label the attachment with the question number. Constrain narrative responses to the specific question as is asked on the form; do not respond to multiple questions in one narrative. Responses in the form of a table may be entered into the table provided on this form or in an attachment. If an attachment is used, the table must have the exact headings found on this form, and the see attachment ("A") checkbox must be marked. Label units in narrative responses and tables. Questions that require Applicant to submit items to the Department have a submitted ("S") checkbox, which is marked when the required item is attached to the Preapplication Meeting Form. Label all submitted items with the question number for which they were submitted. For all questions where follow-up is necessary, mark the "F" checkbox in the "Follow-Up" column and write the question number on the "Follow-Up Page".

**S = Submitted.** Use when required item is included with form.

**A = See attachment.** Use when additional space is needed to answer a question.

**F = Follow-up.** Use when follow-up is necessary.

| Questions, Narrative Responses, and Tables                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Check-boxes                                                      | Follow-up                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|----------------------------|
| 1. Do you elect to have DNRC conduct Technical Analyses?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <input checked="" type="checkbox"/> Y <input type="checkbox"/> N | <input type="checkbox"/> F |
| 2. Provide a map created on an aerial photograph or topographic map that shows the following: section corners, township and range, scale bar, north arrow, all proposed points of diversion labeled with a unique POD ID number (include GWIC ID, if available, for wells), all proposed places of use, all proposed conveyance structures (including ditches and pipelines), all proposed places of storage, and places of use for all overlapping water rights. More than one map may be submitted, if necessary to clearly convey all required information. | <input checked="" type="checkbox"/> S                            | <input type="checkbox"/> F |
| 3. Is the project located in a Controlled Groundwater Area or Basin Closure Area? If yes, immediately go to Mandatory Project-Specific questions 54 to 56 because Form 600 may be the incorrect form, or this project may not meet the requirements for the Department to accept a Form 600.                                                                                                                                                                                                                                                                   | <input type="checkbox"/> Y <input checked="" type="checkbox"/> N | <input type="checkbox"/> F |
| 4. Is the proposed use temporary?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <input type="checkbox"/> Y <input checked="" type="checkbox"/> N | <input type="checkbox"/> F |
| a. If yes, when will the appropriation cease?<br>_____                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <input type="checkbox"/> A                                       | <input type="checkbox"/> F |

|                                                                                                                                                                 |                            |                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|----------------------------|
| 5. Describe the proposed purpose information, including period of diversion (MM/DD-MM/DD), period of use (MM/DD-MM/DD), flow rate (GPM or CFS) and volume (AF). | <input type="checkbox"/> A | <input type="checkbox"/> F |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|----------------------------|

| Purpose       | Period of Diversion | Period of Use | Flow Rate |                                     |                          | Volume |

| 32. Submit Aquifer Test Data Form (Form 633). If a variance is requested, Form 633 must be submitted on or before the Variance Request Deadline. If no variance is requested, Form 633 is due by the time the preapplication meeting form is complete but may be submitted earlier. However, if the Department determines a variance is needed and the Variance Request Deadline has passed, to submit the Form 653 you must reschedule the preapplication meeting or submit the application without expedited fees and timelines (ARM 36.12.1302(6)).                                                                         | <input checked="" type="checkbox"/> S                            | <input type="checkbox"/> F |
| 33. Submit the Aquifer Testing Addendum (Form 600/606-ATA) and associated materials (e.g., well logs). If you request a variance, Form 600/606-ATA must be submitted on or before the Variance Request Deadline. If no variance is requested, Form 600/606-ATA is due by the time the preapplication meeting form is complete but may be submitted earlier. However, if the Department determines a variance is needed and the Variance Request Deadline has passed, to submit the Form 653 you must reschedule the preapplication meeting or submit the application without expedited fees and timelines (ARM 36.12.1302(6)). | <input checked="" type="checkbox"/> S                            | <input type="checkbox"/> F |
| 34. Are you requesting a variance from ARM 36.12.121? If you are unsure if a variance request will be needed, mark follow-up and answer this question once Form 600/606-ATA and Form 633 are complete. A variance must be requested by the Variance Request Deadline.                                                                                                                                                                                                                                                                                                                                                          | <input checked="" type="checkbox"/> Y <input type="checkbox"/> N | <input type="checkbox"/> F |
| a. If yes, submit Form 653, Form 600/606-ATA, and Form 633 together on or before the Variance Request Deadline.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <input checked="" type="checkbox"/> S                            | <input type="checkbox"/> F |
| b. If no, you may choose to submit Form 600/606-ATA and Form 633 before the Variance Request Deadline, and the Department will review these two forms. However, if the Department determines a variance is needed after the Variance Request Deadline, to submit the Form 653 you must reschedule the preapplication meeting or submit the application without expedited fees and timelines (ARM 36.12.1302(6)).                                                                                                                                                                                                               |                                                                  |                            |

### Surface Water Analysis of Depleted Surface Water

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                  |                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|----------------------------|
| 45. Based on the preliminary net depletion data provided by the Department at this preapplication meeting, what are the hydraulically connected surface water source(s)? <i>*Net depletion data provided by the Department at the preapplication meeting is preliminary and is subject to change during Technical Analyses. If the source or location of net depletion data changes during Technical Analyses, then surface water analysis of depleted surface water source(s) will reflect the Technical Analyses; this will not constitute a change of any element to the proposed application pursuant to ARM 36.12.1302(6)(a). If the type of groundwater diversion for your proposed project is a developed spring, write "NA" and skip to question 51 because this section is complete.</i><br>Lake Blaine (28%), Flathead River (30%), Mill Creek (22%) & Blaine Creek (20%) | <input type="checkbox"/> A                                       | <input type="checkbox"/> F |
| 46. Answer the questions in this section one time for each hydraulically connected source. Use the "Additional Hydraulically Connected Source (600P)" sheet, as necessary. For which hydraulically connected source are you answering questions 47 to 50? <u>Flathead River</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                  | <input type="checkbox"/> F |
| 47. Are stream gage data available?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <input checked="" type="checkbox"/> Y <input type="checkbox"/> N | <input type="checkbox"/> F |
| a. If yes, answer question 48.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                  |                            |
| b. If no, answer question 49.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                  |                            |

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|----------------------------|
| 51. Does your project include one or more wells, pumping pits, or ponds that are in a basin closure area? If yes, fill out questions 52 to 53. Your project must have a Hydrogeologic Report that conforms with § 85-2-361 to comply with the requirements of § 85-2-360, MCA. A Hydrogeologic Report Addendum (Form 600-HRA) or Department Technical Analyses may be used to meet these requirements.                                                                                                                                                                         | <input type="checkbox"/> Y <input checked="" type="checkbox"/> N | <input type="checkbox"/> F |
| 52. Did you elect in question 1 for the Department to conduct the Technical Analyses?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <input checked="" type="checkbox"/> Y <input type="checkbox"/> N | <input type="checkbox"/> F |
| a. If yes, the Basin Closure Area Addendum (Form 600-BCA), Form 600-HRA, and Hydrogeologic Report are not required at this time. The Department's Technical Analyses will meet requirements of §85-2-360, MCA for a Hydrogeologic Report and Form 600-HRA. Form 600-BCA will be required with application submittal.                                                                                                                                                                                                                                                           |                                                                  |                            |
| b. If no, submit the Basin Closure Area Addendum (Form 600-BCA) and Hydrogeologic Report Addendum (600-HRA) with your Technical Analyses.                                                                                                                                                                                                                                                                                                                                                                                                                                      | <input type="checkbox"/> S                                       | <input type="checkbox"/> F |
| 53. If the Hydrogeologic Report indicates that the proposed groundwater use will impact a surface water source, identify and explain which of the following three options best describes your plan to mitigate depletions of hydraulically connected surface water and respond to the relevant questions below.<br><input type="checkbox"/> Application to Change a Water Right to mitigate the adverse effects created<br><input type="checkbox"/> Alternative mitigation plan<br><input checked="" type="checkbox"/> Documentation to show a mitigation plan is not required |                                                                  |                            |
| a. Application to Change a Water Right to mitigate the adverse effects created: Submit a summary of your initial proposal. <i>A separate Preapplication Meeting will be required for each Application to Change a Water right to a mitigation or aquifer recharge purpose to qualify for expedited timelines and reduced filing fees for the project per ARM 36.12.1302(7)(a).</i>                                                                                                                                                                                             | <input type="checkbox"/> S                                       | <input type="checkbox"/> F |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <p>64. Describe the size, materials, capacity, and configuration of infrastructure to convey water from point of diversion to place of use. This may include but is not limited to, pipelines and ditches. Include a description of any losses related to the proposed conveyance. Ditch conveyance losses may be estimated numerous ways, which include a ditch loss rate or Department standard methods. You may work with the Department to estimate ditch conveyance losses but will need to provide sufficient baseline information; which includes ditch slope, dimensions, length, lining material, soil type, and location.</p> <p>Water will be diverted from the well via a submersible pump controlled by a VFD and two pressure tanks. Water will be conveyed from the well via 3-inch diameter galvanized drop pipe and into a buried 3-inch HDPE supply line as shown on sheet C122. No losses are anticipated with conveyance.</p> <hr/> <hr/> <hr/> <hr/> <hr/> | <input type="checkbox"/> A |
| <p>65. Describe how the proposed diversion and conveyance infrastructure can provide the required flow and volume, for the purposes plus any conveyance losses and storage, throughout the proposed period of diversion.</p> <p>No losses are associated with conveyance as piping will be utilized. Water will be served to the church building of 3-inch diameter HDPE pipe. The piping will run from the wellhead to the pump house (situated above the in-ground fire storage tank). From the pump house, water is conveyed via 3-inch HDPE pipe to the church building. The pipe is shown on the Site utility plans (sheets C-121 and C-122) and spans a distance of approximately 590 feet. Piping for fire suppression system is also shown on sheets C-121 and C-122 and consists of 6 and 8-inch diameter HDPE. The fire suppression system sources water from the 30,000 gallon in-ground storage tank.</p> <hr/> <hr/> <hr/>                                         | <input type="checkbox"/> A |
| <p>66. Provide a plan of operations, which includes specific information about how water is delivered within the place of use. This may include, where applicable, the range of flow rates needed for a pivot.</p> <p>Water will be diverted from the well via a submersible pump controlled by a VFD and two pressure tanks. The VFD and pressure tanks will operate in tandem to maintain system pressure. The lawn and garden irrigation system is under design. Irrigation will occur outside of church service hours. Pump specifications, friction loss calculations, and preliminary irrigation system design will be provided with the application for beneficial water use.</p> <hr/> <hr/> <hr/>                                                                                                                                                                                                                                                                      | <input type="checkbox"/> A |

## FOLLOW-UP

*The tables below will identify all questions marked for follow-up. Applicant follow-up will be submitted with the completed Preapplication Meeting Form: Part B (Form 600P-B). Applicant will provide all responses to questions marked for follow-up on a separate document entitled "Follow-up Responses." At the preapplication meeting, the Department may offer to provide the Applicant with information pertinent to identified follow-up. In this case, record in the notes column what information the Department will provide and the date by which the Department will email this information to the Applicant. This information will supplement but not replace Applicant follow-up. It is the responsibility of the Applicant to provide all follow-up, including questions supplemented by Department information, in the "Follow-up Responses" document.*

*The “Follow-up Responses” document must conform to the following standards. Label all responses with the question number. Answer questions in the same format as the form. For responses in the form of checkboxes, write “Y”, “N”, “S”. Constrain narrative responses to the specific question as is asked on the form; do not respond to multiple questions in one narrative. Label units in narrative responses and tables. Tables must have the exact headings found on the form. Questions that require items to be submitted to the Department may be marked “S” when the required item is attached to the Preapplication Meeting Form. Label all submitted items with the question number for which they were submitted.*

***The Applicant may not alter the Preapplication Meeting Form: Part A (Form 600P-A) signed at the Preapplication Meeting. Instead, the Applicant must use the Amended Responses procedure defined in Form 600P-B. Do not include additional information for questions that were not marked for follow-up on this table; instead include any additional information pursuant to the process for amending responses defined in Form 600P-B.***

[illegible]

## PREAPPLICATION MEETING AFFIDAVIT & CERTIFICATION

"We attest that the information on this form accurately describes the proposed project discussed during the preapplication meeting, and that the items marked for follow-up will require the Applicant to provide additional information before the form is deemed complete."

"Applicant acknowledges that any information provided by the Department during the preapplication meeting is preliminary and subject to change."

"Applicant acknowledges that if the follow-up information provided to the Department substantially changes the proposed project, for example in a way that alters which sections of the form are applicable or which technical analyses are required, or who is to complete the technical analyses, the applicant will need to schedule a new preapplication meeting so that the Department can identify any additional information necessary for completion of the technical analyses (ARM 36.12.1302(3)(c))."

Upon Department receipt of the completed form (within 180 days following the meeting), the Department reserves five business days to return the form to the applicant if:

- 1 – the completed form does not include all necessary follow-up information identified in the meeting, OR
- 2 – the completed form is not adequate for the Department to proceed with technical analyses, OR
- 3 – the applicant has elected to complete technical analyses and has not submitted each piece of technical analysis required, OR
- 4 – the applicant has substantially changed the details of the proposed project, such as in a way that alters which sections of the form are applicable, which technical analyses are required, or who is to complete the technical analyses.

If the Department returns the form to the Applicant within these five days due to reasons 1-3 above, the Applicant can use the balance of their 180-day period in ARM 36.12.1302(4) or (5) to gather the remaining follow-up information needed. If there is no time remaining in the 180-day period, the Applicant can submit a written request for a new preapplication meeting, pursuant to ARM 36.12.1302(2). Even if there is still time remaining, the Applicant can choose to schedule a new preapplication meeting. The Department shall transfer the \$500 payment received to the new preapplication meeting or refund the payment to the Applicant if the Applicant desires. If the Department returns the form to the Applicant within these five days due to reason (4) above, the Applicant must submit a written request for a new preapplication meeting, pursuant to ARM 36.12.1302(2). The Department shall transfer the \$500 payment received to the new preapplication meeting or refund the payment to the Applicant if the Applicant desires.

## **Aquifer Testing Addendum and Variance Request**

**APPLICATION FOR BENEFICIAL WATER USE PERMIT OR  
APPLICATION TO CHANGE A WATER RIGHT  
AQUIFER TESTING ADDENDUM  
ARM 36.12.121**

Complete this addendum if the source of water for a Beneficial Water Use Permit or Water Right Change application is groundwater. Do not use this form if the source is a developed spring. Check the box denoting the information is attached or data was collected following minimum testing procedures. On a separate document, address the required information. Attachments must be labeled as shown in the sections below (i.e., ATA.3.a).

**Section 1. Attachments must make specific reference to the section item shown.**

**VARIANCE INFORMATION:**

- ATA.1.a ☒ The Applicant submitted a variance request per ARM 36.12.123 for a variance from the requirements of ARM 36.12.121 and has provided a copy of the written request.

**Section 2. Attachments must make specific reference to the section item shown.**

**MINIMUM INFORMATION THAT MUST BE SUBMITTED WITH APPLICATIONS:**

- ATA.2.a ☒ Provide a map with labeled location of production and observation wells.
- ATA.2.b ☒ Provide well logs of production and observation wells.
- ATA.2.c ☒ Provide Form No. 633, in electronic format, with all information and data provided.
- ATA.2.d ☒ Provide a description of testing methods and quality of the aquifer test and data.

**Section 3. Attachments must make specific reference to the section item shown.**

**MINIMUM TESTING PROCEDURES:**

For any of the following, if the answer is "NO" or "NA", provide information explaining why on a separate attachment.

- ATA.3.a YES ☐ NO ☒ NA ☐ Pumping was maintained throughout the duration of the test and the rate did not depart from the average pumping rate by more than 5%.
- ATA.3.b YES ☒ NO ☐ NA ☐ The average pumping rate is equal to or greater than the proposed flow rate if the application is for one well or if the total proposed rate for multiple wells can be obtained from a single well.
- ATA.3.c YES ☐ NO ☐ NA ☒ The proposed pumping rate was demonstrated by testing multiple wells, and 3.e was met by one well and the remaining flow rate demonstrated by eight-hour drawdown and yield tests on additional production wells under 3.e.ii and 3.e.iii.
- ATA.3.d YES ☒ NO ☐ NA ☐ The pumping rate was measured with a reliable measuring device and recorded with clock time according to the schedule on Form No. 633.

- ATA.3.e** YES ☒ NO ☐ NA ☐ The duration of pumping during an aquifer test was at least 24 hours for a proposed pumping rate and volume equal to or less than 150 gpm or 50 acre-feet, or at least 72 hours for a proposed pumping rate and volume greater than 150 gpm or 50 acre-feet.
- i. If a variance from 3.e was granted, at a minimum, eight-hour drawdown and yield tests were completed on all new production wells.
  - ii. In addition to 3.e, if more than one new production well is proposed, at a minimum, eight-hour drawdown and yield tests were completed on all subsequent new production wells.
  - iii. The testing procedures for a minimum eight-hour drawdown and yield test performed on any production well followed 3.a, 3.d, and 3.h.
- ATA.3.f** YES ☒ NO ☐ NA ☐ One or more observation wells were completed in the same source aquifer as the proposed production well and close enough to the production well so that drawdown is measurable and far enough away so that well hydraulics do not affect the observation well.
- ATA.3.g** YES ☒ NO ☐ NA ☐ Background groundwater levels in the production well and observation well(s) were monitored at frequent intervals for at least two days prior to beginning the aquifer test according to Form No. 633.
- ATA.3.h** YES ☒ NO ☐ NA ☐ Water levels in the production well and observation well(s) were reported with 0.01-foot precision according to the schedule specified on Form No. 633 (8-hour drawdown and yield test only need to provide water levels for drawdown; no background and recovery data are necessary).

## VARIANCE REQUEST

ARM 36.12.123

Form No. 653 (Revised 11/2024)

For Department Use Only

RECEIVED  
DNRC Water Resources

MAY 29 2025

Kalispell Unit

### INSTRUCTIONS

Use this form to request a variance from the requirements of ARM 36.12.121 or 36.12.1702, as provided for in ARM 36.12.123.

Submit this completed form to the appropriate regional office by the deadline established during the preapplication meeting or, if a preapplication meeting is not held, include this request with your filed application or as part of a deficiency response.

Application # 30170796 Basin 76LJ

Received Date 5/29/25

Received By *Frank*

**Applicant Name** Old Apostolic Lutheran Church of Lakeside MT

**Mailing Address** PO Box 854

**City** Kalispell

**Identify from which section(s) of ARM 36.12.121 or 36.12.1702 you are requesting a variance. Refer to the rule for a full list of requirements in these sections.**

☒ **ARM 36.12.121 Aquifer Testing Requirements**

- ☐ (2)(a) map with labeled location of production and observation wells
- ☐ (2)(b) well logs of the production and observation wells
- ☐ (2)(c) Form No. 633, in electronic format, with all information and data provided
- ☒ (3)(a) pumping rate may not depart from the average pumping rate by more than +/- 5%
- ☐ (3)(b) average pumping rate equal to or greater than the proposed flow rate if the application is for one well or if the total proposed rate for multiple wells can be obtained from a single well
- ☐ (3)(c) proposed pumping rate may be demonstrated by testing multiple wells as long as (e) is met by one well and the remaining flow rate is demonstrated by eight-hour drawdown and yield tests on additional production wells under (e)(i)(i)
- ☐ (3)(d) pumping rate must be measured with a reliable measuring device and recorded with clock time according to the schedule on Form No. 633
- ☐ (3)(e) minimum duration of pumping during an aquifer test must be 24 hours for a proposed pumping rate and volume equal to or less than 150 GPM or 50 AF, or 72 hours for a proposed pumping rate and volume greater than 150 GPM or 50 AF
- ☐ (3)(e)(i) at a minimum an eight-hour drawdown and yield test is required on all new production wells
- ☐ (3)(e)(ii) In addition to (e), if more than one new production well is proposed, at a minimum an eight-hour drawdown and yield test is required on all subsequent new production wells
- ☐ (3)(e)(iii) the testing procedures for a minimum eight-hour drawdown and yield test performed on any production well must follow (a), (d), and (h)
- ☐ (3)(f) one or more observation wells must be completed in the same source aquifer as the proposed production well and close enough to the production well so that drawdown is measurable and far enough that well hydraulics do not affect the observation well
- ☐ (3)(g) background groundwater levels in the production well and observation well(s) must be monitored at frequent intervals for at least two days prior to beginning the aquifer test according to the Form No. 633
- ☐ (3)(h) groundwater levels in the production and/or observation well(s) must be reported with 0.01-foot precision according to the schedule specified on Form No. 633

Explain the specific variance you are requesting and the reason for requesting it. Also identify your proposed alternative testing methodology or aquifer test data, if applicable. Attach additional sheets if necessary.

The Old Apostolic Lutheran Church of Lakeside is requesting a variance to the aquifer testing requirement identified as ARM 36.12.121(3)(a) "pumping rate may not depart from the average pumping rate by more than +/- 5%" During test startup (the first two minutes of the test specifically), the pump was ramping up to the target flow rate of 145 GPM as such the average flow rate and for the first ten minutes of the test and the instantaneous flow rates measured during the first 1.5 minutes of testing were below the average testing flow rate of 145.1 GPM and outside the specified 5 percent variance. Flow rates for the remainder of the test were within the specified deviation range and the initially low flow rates during startup (first ten minutes of test) do not impact the usability of the remainder of the test data

☐ ARM 36.12.1702 Physical Surface Water Availability

- ☐ (1)(b) at a minimum, three measurements that reflect high, moderate, and low flows during the period of diversion
- ☐ (4) once monthly measurements at department-approved intervals during the proposed period of diversion

Explain the specific variance you are requesting and the reason for requesting it. Also identify your proposed alternative measurement methodology, if applicable. Attach additional sheets if necessary.

**Date Completed:** 2/4/2025

**MONTANA WELL LOG REPORT****Other Options**

This well log reports the activities of a licensed Montana well driller, serves as the official record of work done within the borehole and casing, and describes the amount of water encountered. This report is compiled electronically from the contents of the Ground Water Information Center (GWIC) database for this site. Acquiring water rights is the well owner's responsibility and is NOT accomplished by the filing of this report.

## DESCRIPTION OF AQUIFER TESTING METHODOLOGY - OLD APOSTOLIC LUTHERAN CHURCH

**ATA.2.d** – A 24-hour aquifer test was conducted utilizing the recently constructed Old Apostolic Lutheran Church (OALC) well as the pumping well. This well is identified by GWIC IDs 335305 and 334409. The well is constructed with a 8-inch diameter steel surface casing to a depth extending to 260 feet BGS. The well is completed with a bentonite annular seal extending to 40 feet BGS. The 8-inch casing is perforated from 230 to 260 feet with four rows of 1/8-inch by 1-inch Holte perforator slots (as shown by GWIC ID 334409). The well was deepened after the initial construction with a 6-inch casing extending from 260 feet BGS to 400 feet BGS. The 6-inch casing is perforated from 260 to 360 feet BGS by four rows of 1/8-inch by 1-inch Holte perforator slots. A test pump was installed in the OLAC at a depth of 230 feet below top of casing (BTOC). Three nearby wells were utilized as observation wells during the aquifer test including GWIC ID numbers 83796, 296587, and 313497. Water levels were measured in the production and observation wells utilizing an electronic tape measure. Following water level measurements, vented pressure transducer data loggers were installed in the wells and programed to record water level data at regular intervals. A minimum of 48-hours of background data was recorded in each of the wells.

The 24-hour aquifer test began on February 27, 2025 at 12:00 pm and continued for 24-hours uninterrupted at an average pumping rate of 145.1 gpm. The flow rate was controlled with a gate valve/VFD and measured with a Flowmec TM Series 4-inch diameter Water Meter combination flow meter and totalizer. During the test, water was discharged approximately 180 feet east of the wellhead to infiltrate into an adjacent agricultural field. After pump shutdown, water levels were monitored for a minimum 24-hour recovery period. The pumping well and monitoring well locations are identified in **Figure 2**. Water levels were measured and recorded with vented In-Situ pressure transducers accurate to 0.01 feet of water. As required, results of the pump test are tabulated in Form 633. Data collection at the pumping and observation wells was in compliance with the schedule identified in DNRC's Form 633. The data associated with this aquifer test is of high quality.

## **Additional Hydraulically Connected Source Sheets**

**APPLICATION FOR BENEFICIAL WATER USE PERMIT**  
**ADDITIONAL HYDRAULICALLY CONNECTED SOURCE SHEET (600P)**  
§ 85-2-311, MCA

Answer every question and applicable follow-up questions. Use the checkboxes to denote yes (“Y”) or no (“N”). Questions that require items to be submitted to the Department have a submitted (“S”) checkbox, which is marked when the required item is attached to the 600P-Preapplication Meeting Form: Part A. Constrain narrative responses to the specific question as is asked on the form; do not respond to multiple questions in one narrative. Responses in the form of a table may be entered into the table provided on this form or in an attachment. If an attachment is used, the table must have the exact headings found on this form, and the see attachment (“A”) checkbox on this form must be marked. Label all units in narrative responses and tables. Label all attachments and submitted items with the question number.

**Use one sheet per hydraulically connected source.**

What additional hydraulically connected source is the sheet for (enter source name/ identifier)? Blaine Creek

Assign a three-character identifier for the hydraulically connected source (for example “YEL” or “TMC”): BLC

**When referencing question numbers in attachments, submittals, follow-ups, and amended responses, use the following format:**

- **Question number - three-character identifier. For example, “48.a.i-YEL” or “48.d.i-TMC”.**
